

LYCANTHROPE IN EBERRON

What if werewolves of Eberron were twelve different “tribes”, each impacted by a different moon of Eberron?

This book is inspired by the homebrewed lunar calendar of Eberron by abexy, the classical World of Darkness game, Werewolf: the Apocalypse by White Wolf, and not the least, this blog post from Keith Baker.

The rules are intended for players to play as lycanthropes, specifically werewolves, in Eberron campaigns. The focus is on creating “tribes” of werewolves, based on the characteristics of each moon and the associated plane. I present the mechanics, and add some lore to fit it as seamless as possible into the world of Eberron.

The intended audience is DMs and troupes familiar with the Eberron setting. The DM’s may find inspiration, particularly for in-depth NPCs, or for a different one-shot or campaign involving an all-werewolf pack.

NEW RULES OF LYCANTHROPY

In D&D 5e, lycanthropy is a curse or disease that can be contracted through a bite or scratch from a lycanthrope. In this version, lycanthropy comes in two forms: a **hereditary** form passed down through bloodlines, and a **contracted** form that is caught like a disease. If it is hereditary, the character is born with lycanthropy, and this cannot be removed, short of a *wish* spell.

HEREDITARY LYCANTHROPY

Hereditary lycanthropes are born to one werewolf parent and one parent who is an ordinary Medium humanoid. Inheritance is not

POWER & INTENTION

These rules are intentionally more powerful than a standard D&D 5e class. They are designed for a party composed entirely of hereditary werewolves acting as a pack.

Werewolves are physically powerful, but struggle with control over their transformations and instincts, and are actively hunted by the Silver Flame. This is in the spirit of the personal horror themes of W:tA and the struggle to maintain one’s humanity.

Central to this tension is the werewolf’s relationship with human society. Hereditary werewolves must breed with humans to sustain their bloodlines, yet humans can be prey, quarry, or beloved companions. This contradiction — needing humanity while standing apart from it, protecting a world that would destroy them if it knew what they were — is the engine of the intended roleplay experience.

guaranteed — the blood may or may not pass to the child — but it cannot be diluted: a character either has hereditary lycanthropy or they do not. The probability and inheritance rules are detailed in the Blood Inheritance section below, after the forms have been described.

A character typically does not know they carry the blood until their passage into adulthood. At that threshold, the first shift comes on its own — involuntary, disorienting, unmistakable. The werewolf parent is charged with being present for this moment, or finding the child swiftly after, and guiding them to their tribe. It is the parent’s responsibility to introduce the young werewolf “cub” to the traditions of their moon, to teach them the first deliberate shift, and to bring them before the tribe’s elders.

Mechanically, this is the point at which a player character gains their first level in the Werewolf Class. From there, the character may take additional werewolf levels whenever they level up, or they may focus on their base class — the blood does not demand constant training, only acknowledgement.

Werewolves, the most common type of hereditary lycanthropes, have an affinity to one of the twelve moons of Eberron, which influences their lycanthropic form and abilities. Werewolves of the same moon tend to form close-knit packs or tribes, often centered around shared beliefs and customs related to their moon.

Through parent to cub, werewolves pass down not only their lycanthropic nature but also their traditions. Each one of the moons correspond to a tribe, and the traditions are detailed below.

Finally, werewolves with hereditary lycanthropy have control over their transformations, and are able to hold in-between forms as well - five forms in total. Only Medium humanoids may be hereditary lycanthropes.

In the cosmology of Eberron, hereditary werewolves are guardians of Eberron, with powers granted to them by Siberys. They are bound to Eberron itself — tied to its moons above and instinctively opposed to the corruption that rises from Khyber below. This is how a parent will explain their world view to cubs. How correct this belief is, and whether this has cosmological implications is campaign-specific and is left to the DM.

CONTRACTED LYCANTHROPY

A character bitten or scratched by a lycanthrope (hereditary or contracted) must make a DC 12 Constitution saving throw. On a failed save, the

character “is cursed” with lycanthropy, as per the original rules.

They cannot pass this on to their offspring, even if they become a lycanthrope themselves. They can, however “infect” others through bites and scratches, as per the original rules.

If contracted werewolves embrace their lycanthropy through one of the methods detailed right below, they gain a level in the Werewolf Class and can continue levelling up in this. They gain all the benefits and drawbacks of lycanthropy, including the five forms detailed below.

Rite of Olarune. Under rare circumstances, a contracted lycanthrope may undergo the *Rite of Olarune*, a druidic ritual that transforms the contracted curse into true hereditary lycanthropy. The rite is cast as a ritual over the course of one hour, performed under a full moon, and requires the willing participation of the subject — it cannot be performed on an

DESIGN INTENT & INSPIRATIONS

Keith Baker’s 2025 blog post on lycanthropes identifies hereditary werewolves as “alphas” and presents several possibilities for how they might fit into Eberron. This book takes a specific direction among those possibilities: drawing on the werewolf traditions in *Werewolf: the Apocalypse*, hereditary werewolves are guardians of Eberron — protectors of the natural order, aligned with the moons of Siberys, and resisting to the corruption of Khyber.

This is a deliberate synthesis of Baker’s Eberron framework and White Wolf’s tradition of werewolves as cosmic guardians caught between two worlds. The result is a class built for personal horror, tribal politics, and the ongoing struggle to remain human enough to live alongside the people you are called to protect — and sometimes prey upon.

Baker identifies six distinct strains of lycanthropy in Eberron. This book maps most closely to two: **Olarune’s Blessed** (nature champions with a gift rather than a curse) for the guardian framework, and **The Changing Folk** (fey beings of Thelanis) for the Rhaan tribe specifically. The strains Baker calls Dyrnn’s Corrupted and the Wild Heart’s skinchangers — both transmissible, neither aligned with guardianship — are treated here as the origins of contracted lycanthropy.

Hereditary lycanthropy is intentionally more powerful than a standard 5e class. It makes most sense to play with a full party of hereditary lycanthropes, similar to *W:tA*, so that the power level and the themes remain consistent across the table.

CONTRACTED LYCANTHROPY

The rules in this book are written for consistency with the original D&D 5e werewolf. The 5e monster stat block for werewolves roughly corresponds to the Hybrid form detailed below, for an NPC of the 8th level. This means that DMs can use the original werewolf stat block for NPC lycanthropes without creating immersion-breaking inconsistencies. If a player wants their character to have the contracted lycanthropy “curse”, they can continue their usual character progression and can access the feats in the Feats section.

unwilling creature. Upon completion, the lycanthropy is no longer a curse. It becomes part of the character’s blood. The character may then take levels in the Werewolf Class. Their moon is determined by whichever of the twelve moons is fullest at the moment the ritual concludes.

The rite is known to **Oalian the Greatpine**, the ancient awakened archdruid of the Eldeen Reaches. At the DM’s discretion, a **Moonspeaker** elder may also be able to perform it, though such knowledge is rare even among their order.

The Traveler. At the DM’s discretion, a contracted werewolf who enters a pact with **the Traveler** may receive the same transformation as a patron boon. The Traveler, one of the Dark Six, is the sovereign of change and transformation and is revered by lycanthropes who view their condition as a gift rather than a curse. The Traveler may offer to “complete” the gift in exchange for service — though the Traveler’s gifts rarely cost what they appear to.

Mechanically, they can take levels in the werewolf class. Their moon is the one that was fullest during the time when the pact with the Traveller was signed. While during regular play, they will look like any other hereditary werewolf. However, they may have distinctions that pop up from time to time, based on the needs of the campaign. For example, because their connection to the moon is weak, they may not receive the advantage and disadvantage to their rolls to shift. Or their nature might reveal that there is something off whenever there is magical scrying on them.

Dyrnn the Corruptor. At the DM’s discretion, **Dyrnn the Corruptor** — the daelkyr whose influence gave rise to the first contracted strains of lycanthropy — may offer a darker version of the same transformation as a warlock pact boon. Where Olarune’s rite cleanses, Dyrnn’s version seals the curse deep into the blood.

Mechanically, they can take levels in the werewolf class. Furthermore, they can choose features from all of the moons - whatever they like. However, spiritually, their connection is not to the moons that are in Syberis, but to Khyber. This means that other hereditary werewolves will typically be able to tell what they are through some sort of visible or olfactory hint. Maybe their growls are eerie, or maybe their eyes shine with a tint, or their elemental magic has a tainted aura. Second, whenever they use a power, they are immediately revealed as an “unnatural” being. Third, they do not receive any advantages or disadvantages to shifting based on the moon phase. Fourth, when they need to roll against Involuntary Shifting (see below), they do so at a disadvantage. Fifth, the daelkyr taint in their

blood leaves them vulnerable to byeshk as well as silver: a byeshk weapon scores a critical hit against them on a roll of 19 or 20, exactly as it would against an aberration originally from Xoriat. Sixth, the corruption struggles to hold its shape: if they end their turn in Hybrid Form without having made an attack roll or taken damage since the start of their turn, they must succeed on a Wisdom saving throw (DC 10) or be compelled to shift one step toward Animal Form (*Frenzy*). On a successful save, the impulse is suppressed until the start of their next turn.

THE FORMS

The five forms represent more than physical transformation — they mark points on the spectrum between a werewolf's two natures. In the Humanoid Form, they pass unnoticed through civilized society; in the Animal Form, they are wholly of the wild. The three forms between are expressions of the struggle itself: powerful and instinctual, never fully free of either pull. For hereditary werewolves, this is not an affliction imposed from outside — it is the defining tension of their existence.

WHO ARE THE DARK PACK?

The **Dark Pack of Droaam** — Zaeurl's nomadic band of werewolves and worgs, sworn enemies of the Silver Flame and loyal allies of the Daughters of Sora Kell — predates this book's twelve-tribe framework, and its exact composition is left to the DM.

Mixed survivors (recommended). The Pack's founding members were purge survivors from several different moons, who no longer identify strongly with the tribe traditions they were born into after those traditions failed to protect them. New members — typically contracted lycanthropes the Pack chooses not to kill — are offered the same choice as any contracted werewolf: complete the transformation through a pact with the Traveler or with Dyrrn the Corruptor (see above). A gentler Dark Pack leans on the Traveler; a darker one leans on Dyrrn. Either reading keeps the Pack's membership varied, and ties its recruitment directly into the pact-boon rules a contracted player character might use themselves.

A single bloodline. Alternatively, a DM may prefer to make the whole Pack one thing, for a cleaner story:

- *All Dyrrn's Corrupted* — their ruthlessness, and the fact that other hereditary werewolves can sense something is wrong with them, is daelkyr taint rather than zeal. Good for a campaign that wants the Pack to be a monster, not a tragedy.
- *All Zarantyr* — the Pack becomes what Storm and Chaos werewolves look like once every restraint has burned away under grief. Good for a campaign where the party's own Zarantyr packmate has to reckon with what they could become.
- *All Sypheros* — the Pack becomes living proof of exactly what the other eleven tribes already fear about Mabar's tribe. Good for a campaign built on Sypheros's ongoing struggle to be trusted.

Based on the campaign needs, feel free to mix-and-match.

A lycanthrope has five forms:

- **Humanoid Form:** The lycanthrope appears as a normal humanoid of their race.
- **Shifter Form:** The lycanthrope takes on a mix of humanoid and animal features, gaining some of the abilities of their animal form. In this form, they resemble Shifters.
- **Hybrid Form:** This is the hybrid form from D&D 5e.
- **Dire Form:** The lycanthrope takes on a larger and more powerful version of their animal form, gaining enhanced abilities.
- **Animal Form:** The lycanthrope fully transforms into their animal form.

Contracted lycanthropes have no control over their transformations and will shift into their Hybrid form during a full moon. However, hereditary lycanthropes have control over their shifts and can choose to shift into any of the five forms.

To shift between these forms, the lycanthrope must use an action on their turn. They can shift only to the next form up or down the list as one action. For example, they can shift from Humanoid to Shifter, or from Hybrid to Dire, but not Humanoid to Hybrid in a single action — that takes two turns.

This transformation, “shifting”, requires a Wisdom check. If their moon is dark (new moon), the check is made with disadvantage. If their moon is full, the check is made with advantage. The DC of the check is 18 - the character level in the werewolf class/2 (rounded down), as per the table below. This means that early on, the characters will not be able to rely on their shifting abilities as much, outside of the full moon phase. To determine the phase of the moon, either use a d10, with 5 being new moon and 0 being full moon, or use the amazing the homebrewed lunar calendar of Eberron by abexy.

SHIFTING DC BY LEVEL

Level	Shifting DC
1-2	17
3-4	16
5-6	15
7-8	14
9-10	13
11-12	12
13-14	11
15-16	10
17-18	9
19-20	8

The transformation is a magical effect. On the turn, this will register as such on spells like *detect magic*. It can be suppressed by *antimagic field* or similar effects, but not dispelled. In other

words, the transformation cannot take place in an *antimagic field*, but the werewolf that has already completed the transformation remains in the form that they transformed into. At the DM's discretion, *counterspell* may be used to prevent a lycanthrope from shifting if cast as a reaction before they use their action to shift. Treat the shift as a spell whose level is given by the Spell Level column in the Werewolf Class table. Alternatively, the roll may be made at a disadvantage. The lycanthrope can try again on their next turn.

Each one of the forms come with their own set of abilities and traits, which are detailed in the next sections for werewolves.

HUMANOID FORM

In this form, the werewolf appears as a normal humanoid of their race.

Exhaustion. When shifting back to this form from any other form, the werewolf suffers one level of exhaustion.

Vulnerability. Werewolves in all forms have vulnerability to silver and silvered weapons.

SHIFTER FORM

In this form, the werewolf resembles a Longtooth Shifter with relatively heavy build and will likely be mistaken for one.¹

When shifting from the Humanoid Form to the Shifter Form, the lycanthrope does not lose their

¹ If a check is needed, the DC is 19 to identify them as a lycanthrope rather than a Shifter on a Nature (Wis) or Arcana (Int) check. However, unless there is a specific reason to suspect a lycanthrope, people will assume they are a Shifter without any checks.

SHIFTING & 2024 RULES

The 2024 rules make the werewolf transformation a bonus action. If using the 2024 ruleset, "shifting" is a bonus action.

SILVER VULNERABILITY & 2024 RULES

The 2014 stat block grants immunity to bludgeoning, piercing, and slashing damage from nonmagical attacks *except* those made with silvered weapons — silver simply removes the immunity, rather than dealing extra damage. The 2024 revision drops the silvered-weapon exception entirely, making the immunity unconditional and silver mechanically irrelevant. This book goes further than either version: true vulnerability, dealing double damage on a hit with a silvered weapon. The Silver Flame's persecution of lycanthropes and the power of silver as a supernatural bane are central to the setting and to the personal horror themes of this homebrew. Removing silver vulnerability would diminish both the threat posed by werewolf hunters and the dread of knowing exactly what can kill you. DMs who prefer a milder touch may scale this back to the 2014 behavior (silver simply bypasses resistance/immunity, no bonus damage) or the 2024 behavior (silver is unremarkable) at their discretion.

items or clothing, unless there is something particular about the item or the clothes (really tight-fitting silk clothes, crystals, fragile items, delicate and tight fabrics, etc).

Attribute Bonuses. Their Strength increases by 2, up to a maximum of 25, and their Dexterity increases by 1, also up to a maximum of 25.

Damage Resistance. They gain resistance to bludgeoning, piercing, and slashing damage from nonmagical weapons that aren't silvered.

Vulnerability. Werewolves in all forms have vulnerability to silver and silvered weapons.

Claw Attack. Their unarmed strikes deal 1d6 slashing damage, plus their strength modifier. They count as magical for the purpose of overcoming resistance and immunity to nonmagical attacks and damage. They are proficient with this attack.

HYBRID FORM

This is the majestic, impressive werewolf look - it is the hybrid form from D&D 5e.

When shifting from the Shifter Form to the Hybrid Form, the lycanthrope loses their items. They are either torn, or dropped to the ground. Magical rings, necklaces, amulets are an exception, as well as some loose-fitting items, such as cloaks and scarves.

Attribute Bonuses. Their Strength increases by 6 from their human form, up to a maximum of 25, and their Dexterity increases by 3, also up to a maximum of 25.

Damage Immunity. They gain immunity to bludgeoning, piercing, and slashing damage from nonmagical weapons that aren't silvered.

Vulnerability. Werewolves in all forms have vulnerability to silver and silvered weapons.

Lack of Speech. They lose the ability to speak, and social checks other than Intimidation automatically fail. Magical communication such as *tongues* or *telepathy* still work, but they cannot cast the spell themselves.

Casting Spells. They cannot cast spells or concentrate on them.

Claw Attack. Their unarmed strikes deal 2d4 slashing damage, plus their strength modifier. They count as magical for the purpose of overcoming resistance and immunity to nonmagical attacks and damage. They are proficient with this attack.

Bite Attack. They can use their action to make a bite attack, dealing 1d8 piercing damage plus their strength modifier. They are proficient with

SHIFTERS & THE SHIFTER FORM

This form is intended to complement the Eberron campaign lore about Shifters being hunted down during the Silver Purge, and the prejudices against them.

this attack. This attack can also transmit lycanthropy if the target fails a DC 12 Constitution saving throw.

Feral Surge. The werewolf gains a +2 bonus to attack rolls and damage rolls with their Claw and Bite attacks. This bonus increases to +3 at werewolf level 9 and +4 at level 17. These bonuses stack with Magic Claw/Bite, Fire Claw/Bite, Ice Claw/Bite, and any other Moon Power that grants a bonus to Claw or Bite attack and damage rolls.

Strength of the Beast. The werewolf has advantage on Strength checks and Strength saving throws.

DIRE FORM

In this form, the werewolf takes on a look similar to a dire wolf, but larger and more powerful. The Dire Form is modeled on the dire wolf stat block from D&D 5e rather than the Hybrid Form: it trades the hybrid's raw combat power for predatory speed, enhanced senses, and pack coordination. This parallels the original W:tA design, where the Crinos (Hybrid) form was the most combat-effective and the Hispo and Lupus forms prioritized movement, tracking, and wilderness survival.

Attribute Bonuses. Their Strength increases by 4 from their human form, up to a maximum of 25, and their Dexterity increases by 2, also up to a maximum of 25.

Damage Resistance. They gain resistance to bludgeoning, piercing, and slashing damage from nonmagical weapons that aren't silvered.

Vulnerability. Werewolves in all forms have vulnerability to silver and silvered weapons.

Lack of Speech. They lose the ability to speak, and social checks other than Intimidation are automatically failed.

Casting Spells. They cannot cast spells or concentrate on them.

Keen Hearing and Smell. The werewolf has advantage on Wisdom (Perception) checks that rely on hearing and smell.

Speed. The werewolf's base movement speed increases by 20 feet.

Bite Attack. They can use their action to make a bite attack, dealing 1d8 piercing damage plus their strength modifier. They are proficient with this attack. This attack can also transmit lycanthropy if the target fails a DC 12 Constitution saving throw. On a hit against a creature, the target must succeed on a DC 13 Strength saving throw or be knocked prone.

Wilderness Survival. The werewolf has advantage on Wisdom (Survival) checks and on Wisdom (Perception) checks made in natural environments.

Proficiency Bonus. They gain proficiency with Stealth and Perception skills.

ANIMAL FORM

In this form, the werewolf fully transforms into a wolf. As with the Dire Form, this form follows the wolf stat block from D&D 5e: lighter, faster, and built for the hunt rather than direct combat.

Vulnerability. Werewolves in all forms have vulnerability to silver and silvered weapons.

Lack of Speech. They lose the ability to speak, and social checks other than Intimidation are automatically failed.

Casting Spells. They cannot cast spells or concentrate on them.

Keen Hearing and Smell. The werewolf has advantage on Wisdom (Perception) checks that rely on hearing and smell.

Speed. The werewolf's base movement speed increases by 10 feet.

Bite Attack. They can use their action to make a bite attack, dealing 1d4 piercing damage plus their strength modifier. They are proficient with this attack. This attack can also transmit lycanthropy if the target fails a DC 12 Constitution saving throw. On a hit against a creature, the target must succeed on a DC 13 Strength saving throw or be knocked prone.

Pack Tactics. If they have an ally within 5 feet of their target, they have advantage on attack rolls against that target.

Wilderness Survival. The werewolf has advantage on Wisdom (Survival) checks and on Wisdom (Perception) checks made in natural environments.

BLOOD INHERITANCE

When one parent is a hereditary werewolf and the other is an ordinary Medium humanoid, the werewolf parent rolls a d4 at the time of the child's birth. The result maps directly onto the form spectrum.²

²The five forms described above are numbered 1 through 5, from Humanoid to Animal. Hybrid — form 3 — is the middle point, and it is the form a werewolf offspring will naturally inhabit. This numbering is the key to how hereditary lycanthropy passes from parent to child.

ONE WEREWOLF PARENT (ROLL 1d4)

d4	Offspring
1	Humanoid. No lycanthropic traits. The child follows the non-werewolf parent's lineage entirely.
2	Shifter. Partial inheritance. The child is born with Shifter traits and is part of the bloodline but cannot take the Werewolf Class.
3	Werewolf. Full hereditary lycanthropy. The child will manifest at the passage into adulthood.
4	Dire Wolf. Born in and locked to Dire Form. Unable to shift or speak. The tribe raises them as a dire wolf within the pack.

When both parents are hereditary werewolves, each rolls a d4 and they add the results. The sum maps to the same spectrum — but the minimum result is 2, and any result of 5 or higher produces a wolf pup born wholly in Animal Form. This means two werewolf parents are *less* likely to produce a werewolf offspring than one werewolf and a human.

TWO WEREWOLF PARENTS — ROLL 2d4 AND ADD

2d4	Offspring
2	Shifter. (1 in 16 chance) Partial inheritance.
3	Werewolf. (2 in 16 chance) Full hereditary lycanthropy.
4	Dire Wolf. (3 in 16 chance) Born in Dire Form; raised as a dire wolf by the pack.
5–8	Wolf Pup. (10 in 16 chance) Born in Animal Form. Cannot shift. Raised as an ordinary wolf.

A werewolf offspring always inherits the moon of the werewolf parent. If both parents are werewolves of different moons, the child's moon is determined by whichever of the two moons is fullest at the moment of birth.

A humanoid with contracted lycanthropy counts as an ordinary humanoid for purposes of blood inheritance — not as a hereditary werewolf. Only hereditary lycanthropy passes through the bloodline; the contracted curse does not.

INVOLUNTARY SHIFTING

Contracted lycanthropes must shift into their Hybrid form during a full moon — only the moon that they are influenced under, not all twelve. Hereditary lycanthropes do not have to shift — they have control over their shifts. However,

there are certain conditions which can cause them to shift unwillingly:

- Taking damage from a silver weapon
- Entering the *frightened* condition
- *Vicious Mockery* spell
- *Tasha's Caustic Brew* spell
- Entering a Barbarian rage
- DM's discretion: once every full moon

If these take place, the lycanthrope must make a Wisdom saving throw. The DC of the check is 18 — the character level in the werewolf class/2 (rounded down). On a failed save, they immediately shift into their Hybrid form. On a successful save, they can choose to resist the shift, and do not need to roll again for 24 hours. If their moon is full, they have disadvantage on this saving throw. If their moon is new, (dark moon) they have advantage on this saving throw. Finally, being under the effect of the spell *Calm Emotions* gives advantage.

A lycanthrope may return from an involuntary shift freely, without a check, using their action on any subsequent turn. The shift back does not cause exhaustion.

If a lycanthrope is under the effect of the *Moonbeam* spell when involuntary shifting would otherwise trigger, *Moonbeam* takes precedence: the lycanthrope is locked in the form the spell forces and cannot shift until they leave the beam.

DETECTING WEREWOLVES

Truesight reveals werewolves for what they are. For dramatic effect, consider describing them as

THE PARADOX OF PURE BLOOD

The numbers above are not accidental. With one werewolf parent, the chance of a werewolf offspring is 1 in 4 (25%). With two werewolf parents, it falls to 2 in 16 (12.5%). Two werewolves together are half as likely to produce a werewolf child as one werewolf and a human.

This mirrors a theme from *Werewolf: the Apocalypse*: the Garou who breed only among themselves tend to produce damaged or diminished offspring. Here the consequence is structural rather than cosmetic — the bloodline needs humans. Werewolves who withdraw entirely from human society will, across generations, produce more wolves than werewolves. Their pack thins. Their tribe contracts.

Most tribes therefore discourage werewolf-werewolf pairings not out of sentiment but out of pragmatic necessity. The tribe's continuity depends on maintaining bonds with the humanoid communities it is sworn to protect — and those bonds must be forged in blood as well as custom.

Dravago and Olarune werewolves are exceptions, though. Wolf pups born of Dravago lineage are welcomed rather than mourned. The Handling moon's werewolves see no diminishment in a child born wholly wolf — only a different kind of packmate.

superimposed images of the Human, Hybrid and the Animal form. In addition, the moon that they are associated with is also revealed with *Truesight*, perhaps as an aura, hue, or outright an image of the moon residing in the Ethereal Plane.

Zone of Truth does not reveal a werewolf on its own, but a creature under its effect cannot lie if asked outright whether they are a lycanthrope. They may still be evasive — deflecting, refusing to answer, or answering a question that was not quite asked — but they cannot flatly deny it while affected. A question like "are you a werewolf" could perhaps be gamed, but a question like "are you or have you ever been a werewolf" or "do you have the ability to change into a werewolf form" is more difficult to evade.

Detect Thoughts should actually be very revealing: the spellcaster should realize that there are two "surface thoughts" existing side-by-side, one human, one animal. This makes perfect sense from a dramatic perspective - one of the critical tensions of the werewolves is the dual existence, the internal conflict between human and beast. It also is a balancing effect on the gameplay. Eyre werewolves are a notable exception to this rule: see *Eyre, Making*, below.

On the magic item and ritual-magic side, this book agrees with the two community-suggested approaches, found on this discussion on RPG Stack Exchange.

The *Sentinel* minor property (DMG p.143) can be tuned, at the item's creation, to a chosen kind of creature; the item then glows faintly whenever such creatures are within 120 feet of it. An item tuned to *shapechangers* would reveal a werewolf even in Humanoid Form — though finding, or commissioning, such an item would likely be a quest in its own right.

A *glyph of warding* can be refined to trigger only for a chosen kind of creature, such as shapechangers, and set as a Spell Glyph storing a visible, no-save spell — *magic missile* is a popular choice — so that a passing werewolf sets

DETECTING LYCANTHROPES & 2024 RULES

The 2014 rules define *truesight* as letting its bearer "perceive the original form of a shapechanger or a creature that is transformed by magic," which unambiguously reveals a werewolf's true nature. The 2024 rules glossary drops the explicit "shapechanger" language, granting only the ability to discern the true form of a creature "that has been transformed by magic." Whether a hereditary werewolf's shift counts as being transformed by magic is left ambiguous even by the 2024 rules' own designers. This book rules that it does — a werewolf's shift is a supernatural gift from Siberys, not a mundane biological trait — so *Truesight* reveals werewolves under either rule set. DMs who prefer a stricter reading of the 2024 wording may rule otherwise.

off an unmistakable signal.

PERSPECTIVES

Good villains think what they are doing is right. Great villains actually are right. – Michael E. Shea, *The Lazy Dungeon Master*

From the perspective of most hereditary werewolves, they are guardians of Eberron against the influence of Khyber, with their powers coming from Siberys. The Inquisition is an organization of radicals and religious zealots. Yes, it is possible for their powers to be contracted by others, but this is just one of the many influences of Khyber. This is nowhere near the bloody genocide that the Silver Flame inflicted on the werewolves.

From the perspective of the Church of the Silver Flame, a werewolf is a werewolf is a werewolf. The threat of a werewolf pandemic is ever-present, and this requires vigilance and containment. Even if the Church were to discover that there are different strains of werewolves, this would not make them any less dangerous to the peoples of Khorvaire.

From the perspective of most werewolves, contracted lycanthropy is an abomination, a result of the Khyber influence.

From the perspective of the Wardens of the Wood and the Gatekeeper druidic circles, hereditary werewolves are kindred, if unusual, guardians. Neither tradition worships the moons the way werewolves do, and neither fully understands the twelve-tribe framework, but both recognize a fellow ward against Khyber's corruption when they see one. This is not limited to Olarune, whose nature-guardian bent makes the kinship most obvious: packs of every moon

THE MASK COUNTER-PLAY

Nystul's magic aura's Mask effect changes what a target appears to be to "spells and magical effects that detect creature type, such as ... the trigger of a symbol spell." A *glyph of warding's* creature-type trigger and a *Sentinel*-tuned item's passive detection both fall squarely into that category, so a werewolf under an active *Nystul's magic aura* slips past both undetected. *Truesight* is a different matter: it is not a spell or effect that "detects creature type" so much as a direct perception of a creature's true form, so it sees through the Mask regardless. This makes *Nystul's magic aura* an appealing tool for an infiltrator werewolf — reliable against glyphs and wards, but useless against a hunter who has *truesight*, or who casts *true seeing* on them directly. Note that the spell requires a willing target and must be cast up to 24 hours in advance, so it favors premeditated infiltration over a spur-of-the-moment escape. Sypheros werewolves eventually gain an innate, always-active version of this Mask effect as a Moon Power (see *Sypheros, Shadow*, below) — for a hunter relying on wards and tuned items rather than *truesight*, they are the tribe most likely to walk straight through.

have, at one point or another, found quiet cooperation with a Warden circle or a Gatekeeper elder, whether trading knowledge of a manifest zone, standing watch together against something that crossed over from Xoriat, or simply being left alone by druids who could tell, and chose not to say anything.

Why Does it Matter?. A good story could involve a recurring Silver Flame villain turning into an ally, perhaps temporarily, at least at first. Similarly, a PC of the Silver Flame could be presented with this alternative world view from a hereditary werewolf, and can now decide to work with them, or against them.

MYSTICISM

The werewolf tribes each tell stories about what their origins are, and pass a unifying mysticism. All werewolves see themselves as guardians of Eberron, and their mysticism tends to focus on balance, being a balancing influence. However, each tribe can have a different opinion on what exactly on Eberron needs guarding, what the priorities are, and what it is their own tribe is focused on guarding. Furthermore, individual packs do not need to buy into the roles either - they can simply find their own way.

Why Does it Matter?. For two reasons: first, the werewolves need some sort of unifying framework to be able to coordinate. Without some understanding of what they are, what role they play, they are just individual monsters, not a group of individuals that can find common cause. This is also a convenient way for the DM to find a hook. "You are a bunch of bad scary wolves" will create one or two sessions; for a campaign, you need more.

The second reason is to go beyond the good & evil duality and create a morally ambiguous party for a more mature game play experience. Going beyond the good and evil duality was something that the original White Wolf games intended, and that Eberron did really well. The werewolves are scary from the perspective of humans. They can potentially cause a catastrophic pandemic, and even end human and humanoid civilizations. From their own perspective, there is now reason to what they are doing: They are guarding something. This something can be nature from the humanoids, but it can also be humanoids from aberrations or from the undead. The people that they wish to guard may actually fight against them, either out of conviction, or out of ignorance, or for completely justified reasons. The point is to add yet another perspective to the complex incentive structures on the Eberron campaign setting.

SHIFTERS VS WEREWOLVES

Werewolves' Shifter Form is similar in look to shifters. This is on purpose: it explains the Church's prejudice against the Shifters. However, *why* is left to the DM, and can very well remain a mystery.

Why Does it Matter?. This explains why the Church of the Silver Flame hunted down shifters along with werewolves. This can also have a terrible but not entirely unjustified rationale: imagine that you are trying to save the world from a potential lycanthropy pandemic and annihilation. Furthermore, you do not have a good way to find the werewolves hiding among shifters. Would you do the horrible math, knowingly kill some innocents? Or would risk many others dying or getting infected through your inaction? This may have played a role in the Inquisition from 832 YK to 882 YK. At DM's discretion, it may still play a role in the most radical factions in the Church, such as the Pure Flame. Perhaps the Shadow Within the Flame is a conspiracy by the Cults of the Dragon Below...

WEREWOLF CLASS

The Werewolf Class is designed as a secondary class, taken alongside — not instead of — a base class. Your base class provides your starting hit points at level 1, primary saving throw proficiencies, starting skill proficiencies, and starting equipment. The Werewolf Class cannot be taken as a character's first class; a character must have at least one level in another class before taking their first werewolf level.

Hit Die. 1d10 per Werewolf class level.

Hit Points per Werewolf Level. 1d10 (or 6) + your Constitution modifier per Werewolf class level after the first.

Saving Throws. Determined by tribe; see the Proficiencies by Tribe section below. When you multiclass into the Werewolf Class, you gain your tribe's saving throw proficiencies if you do not already have them.

Skills. Determined by tribe; see the Proficiencies by Tribe section below. When you multiclass into the Werewolf Class, you choose 2 skills from your tribe's list.

WEREWOLF CLASS

Level	Proficiency	Shifting DC	Spell Level	Extra
1	+2	17	1st	
2	+2	17	1st	
3	+2	16	2nd	Moon Power
4	+2	16	2nd	Feat
5	+3	15	3rd	
6	+3	15	3rd	Moon Power
7	+3	14	4th	
8	+3	14	4th	Feat
9	+4	13	5th	
10	+4	13	5th	Moon Power
11	+4	12	6th	
12	+4	12	6th	Feat
13	+5	11	7th	
14	+5	11	7th	Moon Power
15	+5	10	8th	
16	+5	10	8th	Feat
17	+6	9	9th	
18	+6	9	9th	Moon Power
19	+6	8	9th	Feat
20	+6	8	9th	

In this table, the column “Spell Level” is the effective spell level of a transformation of the werewolf.

PROFICIENCIES BY TRIBE

Zarantyr. Saving throws: Strength, Constitution. Skills (choose 2): Athletics, Intimidation, Nature, Perception, Survival.

Olarune. Saving throws: Strength, Wisdom. Skills (choose 2): Athletics, Nature, Perception, Stealth, Survival.

Therendor. Saving throws: Constitution, Wisdom. Skills (choose 2): Insight, Medicine, Nature, Perception, Survival.

Eyre. Saving throws: Constitution, Intelligence. Skills (choose 2): Arcana, Investigation, Nature, Perception, Sleight of Hand.

Dravago. Saving throws: Wisdom, Charisma. Skills (choose 2): Animal Handling, Nature, Perception, Stealth, Survival.

Nymm. Saving throws: Wisdom, Charisma. Skills (choose 2): History, Insight, Intimidation, Perception, Persuasion.

Lharvion. Saving throws: Intelligence, Wisdom. Skills (choose 2): Arcana, Insight, Investigation, Perception, Stealth.

Barrakas. Saving throws: Dexterity, Wisdom. Skills (choose 2): Athletics, Investigation, Perception, Stealth, Survival.

Rhaan. Saving throws: Wisdom, Charisma. Skills (choose 2): History, Insight, Nature, Perception, Performance.

Sypheros. Saving throws: Dexterity, Charisma. Skills (choose 2): Deception, Insight, Perception, Stealth, Sleight of Hand.

Aryth. Saving throws: Dexterity, Wisdom. Skills (choose 2): Athletics, Insight, Perception, Stealth, Survival.

Vult. Saving throws: Strength, Constitution. Skills (choose 2): Athletics, Intimidation, Perception, Stealth, Survival.

Crya. Saving throws: Wisdom, Charisma. Skills (choose 2): Arcana, History, Insight, Perception, Stealth.

THE MOONS & THE TRIBES

Moon Powers represent instinctual, supernatural advantages granted by the character’s dominant moon. A character selects one Moon at level 3, as shown in the Werewolf Class table. Additional Moon Powers are gained at levels 6, 10, 14, and 18 — five features in total over the full class progression.

At each of these levels, the player selects one feature from their moon’s list. Features may be taken in any order, subject to their prerequisites: some require a minimum werewolf class level, and some require another feature from the same moon to be taken first. A character’s moon cannot be changed once chosen — the bond formed at level 3 is permanent, shaped by lineage and the pull of a specific moon on the lycanthrope’s blood.

Hereditary werewolves understand their moon-bond as part of a broader alignment: they are tied to the moons of Eberron above and instinctively hostile to the corruption of Khyber below. Aberrations, daelkyr, cults of the Dragon Below, and the influence of Khyber’s manifest zones are all viewed with suspicion and often active opposition. Where the moons cycle and the natural world breathes, Khyber represents the antithesis of what werewolves are called to protect — and this hostility is felt in the blood, not merely taught.

Each moon is tied to one of Eberron’s planes of existence, as shown in the table below. This table is based on works from Keith Baker.

MOONS AND ASSOCIATED PLANES

Moon	Dragonmark	Associated Plane
Zarantyr	Storm	Kythri, the Churning Chaos
Olarune	Sentinel	Lamannia, the Twilight Forest
Therendor	Healing	Syrania, the Azure Sky
Eyre	Making	Fernia, the Sea of Fire
Dravago	Handling	Risia, the Plain of Ice
Nymm	Hospitality	Daanvi, the Perfect Order
Lharvion	Detection	Xoriat, the Realm of Madness
Barrakas	Finding	Irian, the Eternal Dawn
Rhaan	Scribing	Thelanis, the Faerie Court
Sypheros	Shadow	Mabar, the Endless Night
Aryth	Passage	Dolurrrh, the Realm of the Dead
Vult	Warding	Shavarath, the Battleground
Crya	Death (lost)	Dal'Quor, the Region of Dreams

When writing the twelve moon tribes and the associated features, I had the White Wolf tribes inspiration in mind. Where it made sense, I used the dragonmark associated with the moon to give the tribe their characteristics and powers. Where that did not quite fit, I took the associate plane of existence from this table. Sometimes I used a combination of both.

While all werewolf tribes pass stories about how they are the guardians of Eberron against Khyber, werewolves of specific tribe and moon can have more specific roles. For instance,

WEREWOLVES & DRAGONMARKED HOUSES

Yes: there is an isomorphism between the moons, the werewolf tribes, and the dragonmarked houses. However, the houses have nothing to do with werewolves, and the dragonmarks have nothing to do with the moon features, at least at the surface level. Dragonmarked houses working with werewolves does not make sense in the greater Eberron politics, other than small clandestine operations and conspiracies. The dragonmarked individuals have different powers than the werewolves. Werewolves themselves are not dragonmarked, and have no race- or species-related constraints. They are designed to be a distinct add-on on Eberron, not change Eberron's existing structures.

All that said, werewolves having a connection to the Draconic Prophecy may make sense for specific campaigns. As usual, the DM knows best.

ZARANTYR, STORM & CHAOS

Perspectives. The balance between chaos and order have to be maintained. Zarantyr werewolves may identify themselves as the embodiment of chaos, a counterbalance to Nymm. Any living thing needs a level of dynamism to survive, and this is what Zarantyr werewolves bring to the table with their powers.

Common Locations. Zarantyr werewolves are drawn to places where the land itself is unstable or contested — storm coasts, war-torn borderlands, the wake of natural disasters, or wherever Kythri's chaotic influence bleeds through as sudden squalls and freak weather. They tend to enjoy being near coasts and mountains, where the winds are strong and storms can be common. They rarely linger in one place; like the storms they are named for, they arrive without warning, do what needs doing, and move on before the dust settles. A great option is to have them in Xen'drik, a complex and chaotic land with its colony and the Traveler's Curse.

Origins. Zarantyr werewolves have different tales of their origin. Some believe that they came from Kythri, the churning chaos. Some tribes claim that their ancestors came from Xen'drik, and have tales of the Shattering. Others are more philosophical, and they claim a mission to be the bringers of chaos as part of the natural order.

Passive Power & Traits. Zarantyr werewolves have advantage on all Charisma (Intimidation) checks in all forms.

Why Does It Matter? An all-Zarantyr pack suits a campaign that wants its guardians to meet trouble head-on rather than work around it — front-line brawlers who solve problems with

overwhelming force first and ask questions after. Their volatile, ever-shifting moon gives them a reputation among the other tribes as unpredictable and quick to anger: a useful loose cannon when the party needs a hammer, a liability when the situation calls for restraint.

Consider these NPCs for your game:

- A Zarantyr champion who shows up at every local crisis like clockwork, ends it through sheer overwhelming force, and vanishes again before anyone can properly thank them — treated as a folk legend rather than a person.
- A Zarantyr elder fighting against their own tribe's restless nature, trying to hold a normally-itinerant pack in one place to defend a single town that has come to depend on them.

ZARANTYR POWERS

Howl to Zarantyr. Same as the *Thunderclap* spell, except that this is a howl or a growl: there is no somatic component, and this howl or growl counts as a verbal component. Note that this means that the *Silence* spell or a similar effect will prevent the lycanthrope from using this effect. *Available Forms* Hybrid, Dire, Animal

Thunderwave. Same as the *Thunderwave* spell, except this is a howl or a growl: there is no somatic component, and this howl or growl counts as a verbal component. Note that this means that the *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Thunderwave II. All *Thunderwave* features now require only a short rest to replenish.

Available Forms As per *Thunderwave*

Prerequisites *Thunderwave*

Human Thunderwave. Same as the feature *Thunderwave* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Thunderwave*

Thunderous Claw. Same as the *Thunderous Smite* spell except this requires no components, and the weapon is claws. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid and any other form that allows claw attacks if a feat or effect allows it.

Thunderous Claw II. All *Thunderous Claw* features now require only a short rest to replenish.

Available Forms As per *Thunderous Claw*

Prerequisites *Thunderous Claw*

Thunderous Bite. Same as the *Thunderous Smite* spell except this requires no components, and the weapon is the bite. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal and any other form that allows bite attacks if a feat or effect allows it.

Thunderous Bite II. All *Thunderous Bite* features now require only a short rest to replenish.

Available Forms As per *Thunderous Bite*

Prerequisites *Thunderous Bite*

Extra Attack. When you take the Attack action, you can make two attacks instead of one. This is the player-facing Extra Attack feature (not the monster action Multiattack), and interacts normally with anything that keys off Extra Attack.

Available Forms Hybrid

Prerequisites Level 5

Extra Attack, Greater. When you take the Attack action, you can make three attacks instead of one.

Available Forms Hybrid

Prerequisites Level 10, *Extra Attack*

Resistance to Thunder. The werewolf has resistance to thunder damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Thunder. The werewolf has resistance to thunder damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Resistance to Thunder*

Resistance to Lightning. The werewolf has resistance to lightning damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Lightning. The werewolf has resistance to lightning damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Resistance to Lightning*

OLARUNE, SENTINEL & THE TWILIGHT FOREST

Perspectives. Olarune werewolves have stories of themselves as the original werewolves. They believe that it was first Olarune that gave the gift of Lycanthropy, and elevated some among the humanoid to be the guardians of Eberron. They put preserving the original state of Eberron, nature. They may be concerned about the proliferation of human and humanoid cities. Some among them may not differentiate much between populous human settlements and the Demon Wastes. Some others may consider themselves to be a counter-balance to the Eyre werewolves. And some others may just want to protect a “territory” from any unnatural influence, whether that be mining, farming, or corruption from Khyber.

Common Locations. Olarune werewolves are drawn to the oldest, most untouched wilderness — ancient forests, sacred groves, and the borders where civilization presses up against land that has never been cleared — with packs most often found near manifest zones touching Lamannia, the Twilight Forest, where the wild feels most alert to the presence of trespassers. They mark and hold territory the way other guardians hold a post: not to claim it, but to keep it whole. They are likely to be encountered in and around The Towering Wood, from its edges to its deepest wilderness. Or any other wood, ranging from the Eldritch Grove to the King’s Forest.

Origins. Olarune werewolves believe themselves to be the first werewolves. Their stories speak of Olarune gifting them lycanthropy as a weapon against Khyber, to preserve balance on Eberron,

and they see themselves as the truest protectors of nature and the wild among the twelve tribes.

Passive Power & Traits. Olarune werewolves cannot be surprised while in Hybrid, Dire, or Animal form.

Why Does It Matter?. An all-Olarune pack suits a campaign about defending a specific, sacred place — an ancient grove, a Lamannia manifest zone, or the last untouched stretch of wilderness before a city’s expansion reaches it. Their command of plant magic and their claim to being the first werewolves make them natural anchors for a campaign about territory, trespass, and what it costs to hold a line that keeps eroding.

Consider these NPCs for your game:

- An Olarune sentinel who has warded a sacred grove with generations of *Entangle* and *Wall of Thorns*, now forced to decide whether to tear down her own wards when the only way through is for an ally who genuinely needs to reach what lies on the other side.
- A young Olarune werewolf whose ancestral territory has been swallowed by a growing city, left guarding a single overgrown lot as though it were still an ancient forest.
- A pack of werewolves who fought as guerillas against Aundair for the secession of the Eldeen Reaches.
- Some Brelish miners in are digging a little bit too deep in Graywall Mountains. A pack of Olarune werewolves want to protect the land from the horror that the miner awoke. Silver Flame inquisitors want to protect the villagers from both the Khyber influence and the werewolves. Who does the party side with, or how do they handle the situation?

OLARUNE POWERS

Pack Guardian. Same as the *Sentinel* feat, except this is an innate supernatural ability rather than a feat. You gain the following benefits:

- When you hit a creature with an opportunity attack, the creature’s speed becomes 0 for the rest of that turn.
- Creatures within your reach provoke opportunity attacks from you even if they take the Disengage action.
- When a creature within 5 feet of you attacks a target other than you, you can use your reaction to make a melee attack against that creature.

Available Forms Hybrid, Dire, Animal

Humanoid Pack Guardian. Same as the feature *Pack Guardian* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Pack Guardian*

Magic Claw. Same as the *Magic Weapon* spell, except this applies to the werewolf's claws rather than a held weapon, and requires no components. The claws gain a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid

Prerequisites Level 3

Magic Bite. Same as the *Magic Weapon* spell, except this applies to the werewolf's bite rather than a held weapon, and requires no components. The bite gains a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Bite Attack. The werewolf can also make a bite attack in Shifter Form. They can use their action to make a bite attack, dealing 1d6 piercing damage plus their Strength modifier. They are proficient with this attack. This attack can also transmit lycanthropy if the target fails a DC 12 Constitution saving throw.

Available Forms Shifter

Prerequisites Level 3

Wilderness Survival. The advantage on Wisdom (Survival) checks and on Wisdom (Perception) checks made in natural environments, normally only granted in Dire and Animal Form, now extends to Humanoid, Shifter, and Hybrid Form as well.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Speak with Plants. Same as the *Speak with Plants* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Speak with Plants, Expanded. *Speak with Plants* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Speak with Plants*

Entangle. Same as the *Entangle* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus,

and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Entangle, Expanded. *Entangle* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Entangle*

Tree Stride. Same as the *Tree Stride* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Plant Growth. Same as the *Plant Growth* spell, requires no components. When used as an action, plants in a 100-foot radius become thick and overgrown; movement through them costs 4 feet of movement per foot traveled. The 8-hour ritual version, which enriches land within a half-mile for a year of doubled harvests, is also available and reflects the Olarune werewolf's role as guardian and caretaker of wild places. You can use the action version a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest. The ritual version may be used once per day.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Freedom of Movement. Same as the *Freedom of Movement* spell, except it only functions in natural environments — forests, mountains, wetlands, and other unspoiled wilderness, at the DM's discretion. It does not function indoors, underground, or within settled or constructed areas. Requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 7

Wrath of Nature. Same as the *Wrath of Nature* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 9

Commune with Nature. Same as the *Commune with Nature* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 9

Wall of Thorns. Same as the *Wall of Thorns* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 11

Transport via Plants. Same as the *Transport via Plants* spell, requires no components — the werewolf need only step into the origin plant. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 11

Resistance to Poison. The werewolf has resistance to poison damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Poison. The werewolf has resistance to poison damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Resistance to Poison

Therendor, Healing

Perspectives. Therendor werewolves are healer werewolves. They are warriors and medics combined into one.

Common Locations. Therendor werewolves rarely form packs among themselves, instead, they join other moons' packs. Since they are medics, and since werewolves may not always have access to other sources of healing that humans have access to, they are typically welcome wherever they go.

Origins. Some Therendor packs believe that their origins go back to the Eldeen Reaches, and some others believe that it goes to Talenta Plains.

Passive Power & Traits. Therendor werewolves carry Syrania's restorative influence through their transformations. When a Therendor werewolf enters Hybrid Form, the body surges with healing energy: they gain temporary hit points equal to their Werewolf class level + their Constitution modifier. These temporary hit points do not stack with those gained from other sources.

Why Does It Matter?. Mechanically, even overpowered werewolf parties will need healers. Werewolves are hunters among humanoids, but they themselves are hunted by powerful entities, and sometimes by well-prepared humanoids.

As an NPC, consider a werewolf who chooses to help the party, either out of compassion, or because the party's goals are aligned. Does the party keep this as an ally, or antagonize them once their werewolf nature is revealed?

Therendor Powers

Healing Howl. Same as the *Healing Word* spell, except this is a howl: there is no somatic component, and the howl counts as the verbal component. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Lick Wounds. As an action, you can lick a creature and restore hit points equal to 1d8 + your werewolf level. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Lick Wounds II. All *Lick Wounds* features now require only a short rest to replenish.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Lick Wounds

Heal Wounds. Same as the feature *Lick Wounds* above, except it is available in all forms.

Ahem, you do not actually need to lick anyone while in the humanoid form, a simple lay-on-hands will do.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Lick Wounds

Suck Poison. *Lick Wounds* now also cures poison.

Available Forms As per *Lick Wounds*

Prerequisites Lick Wounds

Lesser Restoration. Same as the *Lesser Restoration* spell, except the werewolf administers it through a healing lick rather than touch. In humanoid form, a laying on of hands suffices in place of the lick. Requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Scent of Poison and Disease. The werewolf can detect the presence of poison and disease through scent, functioning exactly as the *Detect Poison and Disease* spell except that the werewolf perceives them as distinct smells rather

than a visual aura, and requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Scent of Poison and Disease, Expanded. *Scent of Poison and Disease* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Scent of Poison and Disease*

Greater Restoration. Same as the *Greater Restoration* spell, except the material component (diamond dust) is not required — the werewolf instead administers the restoration through a healing lick. In humanoid form, a laying on of hands suffices in place of the lick. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 9

EYRE: MAKING, HUMANOID COEXISTENCE & FIRE

Perspectives. As guardians, werewolves also need to guard the humans sometimes - Eyre werewolves are well-equipped for this role. Their survival strategy is to live alongside humans,

undetected. In the end, humans and humanoids are all part of Eberron, too. They are the counter-balance to Dravago werewolves.

Common Locations. Werewolves under the auspices of the moon Eyre are drawn to human and humanoid settlements and cities rather than wilderness — forge-quarters, foundries, and crowded lower wards, with likely packs beneath Sharn itself, close to the manifest zone touching Fernia, the Sea of Fire. Their survival strategy sets them apart from every other tribe: not isolation, but proximity — staying close enough to the people they guard that they can act the moment they are needed.

Origins. Eyre werewolves do not have a separate origin story. They tend to think of themselves as humans or humanoids, not a distinct group. They just have a different. . . trait than their neighbours, a certain ability that may be misunderstood by the society at large. So, a Brelish Eyre werewolf is likely to consider themselves as a Brelish individual.

Passive Power & Traits. All werewolves of Eyre can use *Control Flames* and *Create Bonfire* at will, in any form, requiring no components. These function as the cantrip versions of the spells.

Eyre werewolves also have advantage on saving throws against *detect thoughts*, and any surface thoughts read from them come through as those of an ordinary human or humanoid, not the doubled man-and-wolf presence typical of other tribes (see *Detecting Werewolves*, above). This follows naturally from a tribe that does not experience itself as divided in the first place: an Eyre werewolf who thinks of themselves as simply Brelish, or simply Sharn-born, has nothing doubled for a prying mind to find.

Finally, Eyre werewolves, in the Shifter Form, cannot be found out as werewolves, by any checks (see , above). Unless seen *while shifting* (i.e. *transforming*), they are completely unnoticeable as anything other than just Longtooth Shifter characters. There are no tell-tale signs that something is amiss, even to the trained eye, even to actual Shifters.

At the DM's and player's discretion, an Eyre werewolf's fur may carry a fiery red sheen, fitting for a tribe bound to Fernia's flame — but only in Hybrid, Dire, or Animal form. It never shows in Shifter Form, where nothing about them may give them away as anything but an ordinary Longtooth Shifter.

Why Does It Matter?. An all-Eyre pack suits a campaign rooted in a city rather than a wilderness — guardians who watch over forges, foundries, and crowded streets instead of forests, and whose enemies are as likely to be a runaway

magical device or a fire-setting cult as a wild beast. Their comfort with flame and with crowds makes them a natural fit for adventures set in Sharn or any other industrial city, where the danger is built rather than born.

Consider these NPCs for your game:

- A foundry overseer who quietly patrols Sharn's factory district in Hybrid Form after hours, making sure the fires that power the city stay controlled rather than become a danger to it — an Eyre werewolf who treats flame as infrastructure to protect, not a weapon to wield.
- A young Eyre werewolf, born and raised entirely within a city, who has never set foot in true wilderness and finds the countryside as alien and unsettling as most other tribes find the streets of Sharn.
- A pack of fully-armoured werewolves spewing fire from their mouths. . . You didn't know that that is what your campaign needed, did you?

EYRE POWERS

Resistance to Fire. The werewolf has resistance to fire damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Fire. The werewolf has resistance to fire damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Resistance to Fire

Fire Claw. Same as the *Magic Weapon* spell, except this applies to the werewolf's claws rather than a held weapon, requires no components, and the claws deal fire damage instead of slashing for the duration. The claws gain a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid

Prerequisites Level 3

Fire Bite. Same as the *Magic Weapon* spell, except this applies to the werewolf's bite rather than a held weapon, requires no components, and the bite deals fire damage instead of piercing for the duration. The bite gains a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Heat Metal. Same as the *Heat Metal* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Mending. Same as the *Mending* cantrip, requires no components, but only works on objects that were once living — wood, bone, leather, cloth, and similar materials. It cannot repair metal, stone, glass, or other inorganic materials. Can be used as many times as desired.

Available Forms Humanoid, Shifter

Growing Armor. Eyre werewolves adapt to existing within human communities, and they have a connection to "Making". When shifting from Shifter Form into Hybrid Form, the werewolf's worn armor grows and reshapes with their body instead of being torn away or falling to the ground, as it normally would. The armor's AC bonus continues to apply, and any maximum Dexterity bonus or Strength requirement it imposes still applies as normal. This does not extend to weapons, shields, or any other equipment, which are lost as usual.

Available Forms Hybrid

Prerequisites Level 3

Growing Armor, Expanded. *Growing Armor* now also applies when shifting from Hybrid Form into Dire Form.

Available Forms Hybrid, Dire

Prerequisites Growing Armor

Growing Armor, Greater. *Growing Armor* now also applies when shifting from Dire Form into Animal Form.

Available Forms Hybrid, Dire, Animal

Prerequisites Growing Armor, Expanded

Howl to the City. Same as the *Commune with City* spell, except it requires a howl instead of its verbal and somatic components: a long, resonant call the werewolf can only manage in Hybrid Form. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid

Prerequisites Level 9

DRAVAGO: HANDLING, ANIMAL COEXISTENCE & COLD

Perspectives. Hunt. Survive. Exist. Dravago exists with the animals. They lead packs of wolves, or guard multiple packs, or guard the creatures of the wilderness. Their identity can be closer to that of an animal, and their ability to reason is just an extra add-on for them to survive in the wilderness, or to guard the said wilderness. Of all twelve tribes, Dravago packs are the ones most likely to find genuine common cause with the Ashbound — the druidic circle that holds civilization itself, not just Khyber's corruption, as the true threat to the natural order. Most Dravago werewolves keep the Ashbound at arm's length; a handful do not, and those are the pack elders other tribes quietly point to when they call Dravago the most radical of the twelve.

Common Locations. Dravago werewolves are the handlers and herders of the twelve tribes, drawn to open range and cold wilderness — tundra, high pasture, and the herding grounds where wild and domesticated beasts move together — with packs most often found near manifest zones touching Risia, the Plain of Ice, where the cold holds an unnatural stillness and even the seasons seem slower to turn. Their packs are often indistinguishable from ordinary wolf packs at a distance, and deliberately so — moving with, not apart from, the beasts they watch over.

Origins. Dravago werewolves do not think of themselves as having an origin story. Rather, they have a tendency to think of themselves as animals who can fake being a human or a humanoid. They spend long times in the bitter cold wilderness, away from humans.

Passive Power & Traits. They have many moon features - to keep things balanced and because nothing seemed to fit, they do not get a passive power.

Suggested fur colour: white, or ice blue.

Why Does It Matter?. An all-Dravago pack suits a campaign centered on wilderness, nature. We are talking about campaigns that draw inspiration from Jack London's "Call of the Wild", "White Fang" and "Lighting a Fire". Or perhaps a campaign of werewolves against aberrations, and protecting the wilderness from them, with zero human or humanoid characters.

Consider these NPCs for your game:

- A Dravago elder whose apparent "pack of trained wolves" is in fact her own children and grandchildren, several of whom were born in Animal Form and have never taken a humanoid shape — and who has little patience for outsiders who assume this is a tragedy rather than a choice.
- A Dravago werewolf quietly using *Awaken Wolf* to build an intelligence network of ordinary-seeming wolves across a region, feeding word back to their pack long before any messenger could.
- A Dravago werewolf working as a beastmaster for a caravan or noble house, whose employer has no idea their "gifted animal handler" also patrols the perimeter in Dire Form once the camp is asleep.
- A Dravago werewolf who penetrated House Vadalis - the house scions wonder how they are so good at handling without having the mark, but chalk it off as talent.
- Just a villain who has this ice-cold bite - isn't that intriguing to the players?

DRAVAGO POWERS

Speak with Animals. Same as the *Speak with Animals* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Speak with Animals, Advanced. All *Speak with Animals* features now require only a short rest to replenish.

Available Forms As per *Speak with Animals*

Prerequisites *Speak with Animals*

Humanoid Speak with Animals. Same as the feature *Speak with Animals* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Speak with Animals*

Speak with Animals Anytime. The feature *Speak with Animals* is always available.

Available Forms As per *Speak with Animals*
Prerequisites *Speak with Animals*, *Advanced*

Animal Messenger. Same as the *Animal Messenger* spell. You can use this feature as many times as you like.

Available Forms Humanoid, Shifter

Summon Beast. Same as the *Summon Beast* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Dire, Animal

Summon Beast, Expanded. *Summon Beast* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Summon Beast*

Tree Stride. Same as the *Tree Stride* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Summon Pack. The werewolf lets out a long howl, summoning a pack of wolves as per the *Conjure Animals* spell, except that only wolves and dire wolves may be summoned, and the howl counts as the verbal component with no somatic component. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. By default this summons eight wolves (CR 1/4 each). Under the 2024 rules, dire wolves (CR 1) are also available: the werewolf may instead summon two dire wolves, or one dire wolf and four wolves, spending the same total CR budget of 2. The summoned wolves are friendly to the werewolf and their allies, follow verbal commands without requiring an action, and vanish when the spell ends or they reach 0 hit points. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Dire, Animal

Prerequisites Level 5

Summon Pack, Expanded. *Summon Pack* is now available in all forms. The howl requirement still applies in Hybrid and Dire forms; in Humanoid and Shifter forms, the werewolf may call the pack through a resonant vocalization rather than a full howl. The *Silence* spell or a similar effect will prevent the use of this feature in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Summon Pack*

Awaken Wolf. Same as the *Awaken* spell, except this feature can only target wolves and dire wolves, and requires no material component. The agate is not needed — the bond is formed through prolonged contact and the werewolf's own supernatural connection to the pack. The awakened wolf is charmed by the werewolf for 30 days; after that, it decides independently whether to remain friendly based on how it was treated. You can use this feature once, and you regain the use when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 6

Resistance to Cold. The werewolf has resistance to cold damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Cold. The werewolf has resistance to cold damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Resistance to Cold*

Ice Claw. Same as the *Magic Weapon* spell, except this applies to the werewolf's claws rather than a held weapon, requires no components, and the claws deal cold damage instead of slashing for the duration. The claws gain a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid

Prerequisites Level 3

Ice Bite. Same as the *Magic Weapon* spell, except this applies to the werewolf's bite rather than a held weapon, requires no components, and the bite deals cold damage instead of piercing for the duration. The bite gains a +1 bonus to attack and damage rolls for the duration. This bonus increases to +2 at werewolf level 7, and +3 at werewolf level 13. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Bite Attack. The werewolf can also make a bite attack in Shifter Form. They can use their action to make a bite attack, dealing 1d6 piercing damage plus their Strength modifier. They are proficient with this attack. This attack can also transmit lycanthropy if the target fails a DC 12 Constitution saving throw.

Available Forms Shifter

Prerequisites Level 3

Wilderness Survival. The advantage on Wisdom (Survival) checks and on Wisdom (Perception) checks made in natural environments, normally only granted in Dire and Animal Form, now extends to Humanoid, Shifter, and Hybrid Form as well.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

NYMM: HOSPITALITY

Perspectives. Nymm werewolves carry an ancient claim to leadership among the twelve tribes. Their moon is Nymm, which connects them to the plane of Daanvi, the Perfect Order, and the tribe's culture reflects it: formal hierarchies, long memories, and a sense of dynastic responsibility that the other tribes sometimes find exhausting. At their best, they are peacekeepers and arbiters — the tribe most likely to be called upon to mediate disputes between packs, to preside over councils, and to remember the precedents that make the twelve something more than a collection of isolated bloodlines. At their worst, they are rigid and slow to admit that the order they protect has already changed around them.

Common Locations.

Origins. Typically, their packs will remember the full lineage going back multiple generations, well before the Silver Purge, back when the pack first got together. How old the oldest pack is is left to the DM — see the section on the alternative histories of werewolves in Eberron.

Passive Power & Traits. Nymm werewolves carry Daanvi's influence in their Hybrid Form. Where other werewolves might be undone by fear or enchantment, a Nymm werewolf in Hybrid Form achieves a clarity of purpose that makes them immune to the *charmed* and *frightened* conditions. The Perfect Order of Daanvi clears the beast-mind of social manipulation — there is no room for doubt or terror when purpose is absolute.

Why Does It Matter?.

NYMM POWERS

Soothing Howl. The werewolf emits a low, resonant howl that calms the instincts of nearby wolves, dire wolves, and other natural beasts. This functions as the *Calm Emotions* spell, but only affects beasts (not humanoids), and uses the howl as a verbal component with no somatic component. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. As per the Involuntary Shifting rules, any creature under the effect of *Calm Emotions* gains advantage on their involuntary shifting saving throw. Lycanthropes affected by this howl

therefore gain advantage on those saves for as long as the effect lasts. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Animal

Prerequisites Level 3

Hybrid Form Soothing Howl. *Soothing Howl* now affects all creatures, not just beasts, and is available in Hybrid, Dire, and Animal forms. The howl requirement still applies; the *Silence* spell or a similar effect will prevent the use of this feature. All affected creatures, including lycanthropes in any form, gain advantage on their involuntary shifting saving throws for the duration.

Available Forms Hybrid, Dire, Animal

Prerequisites *Soothing Howl*

Humanoid Soothing Howl. *Soothing Howl* now affects all creatures, not just beasts, and is available in all forms. In humanoid and shifter forms, the lycanthrope does not howl — they use speech instead. All affected creatures gain advantage on their involuntary shifting saving throws for the duration.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Soothing Howl*

Aura of Purity. Same as the *Aura of Purity* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 6

Commanding Presence. The werewolf has advantage on all Charisma (Intimidation) checks. This feature is always active once taken.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Order Within. The werewolf's iron self-possession lets them resist the pull of a forced transformation: they have advantage on Involuntary Shifting saving throws. This is the discipline at the heart of Daanvi's Perfect Order — holding one's shape even when the world tries to force a change.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Aura of Order. The werewolf's self-possession becomes absolute: they are immune to being forced into an involuntary shift. Daanvi's Perfect Order also radiates outward: allies within 30 feet of the werewolf gain advantage on their own Involuntary Shifting saving throws, for as long as

they remain in range. This aura requires no action to maintain — it is simply always active.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Order Within, Level 9

Zone of Truth. Same as the *Zone of Truth* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Commanding Howl. Same as the *Command* spell, except this is a howl: a single sharp bark or cry takes the place of the spoken word, and the howl counts as the verbal component. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Silver Ward. Daanvi's Perfect Order steadies the werewolf against even their bloodline's oldest weakness. The werewolf's vulnerability to silver and silvered weapons no longer applies; such weapons deal only their normal damage to the werewolf.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 10

Silver Ward, Greater. Silver and silvered weapons are no longer treated any differently than any other weapon of the same kind: they neither bypass the werewolf's damage resistance or immunity, nor deal any additional damage.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 18, *Silver Ward*

LHARVION: DETECTION & MADNESS

Perspectives. Lharvion werewolves are the watchers and the seekers: unusually sensitive to the invisible and the wrong, drawn to perceive what others prefer to overlook. Magical auras read to them like scents; thoughts surface as unwilled impressions; the line between perception and intrusion grows thin.

Among the twelve tribes, they are prized as scouts and interrogators, and regarded with unease for exactly the same reasons. Their moon's connection to Xoriat, the Realm of Madness, does not manifest as instability in most of the tribe — but it grants them a tolerance for unsettling truths that their packmates do not always share.

Common Locations.

Origins.

Passive Power & Traits. All Lharvion werewolves have advantage on Wisdom (Perception) checks to detect hidden creatures, in all forms.

At the DM's and player's discretion, a Lharvion werewolf's fur may carry a faint purple sheen, most visible in Hybrid, Dire, or Animal form — an echo, whether coincidence or omen, of the byeshk their blood is so well suited to wielding against Xoriat's own.

Why Does It Matter?.

LHARVION POWERS

Dissonant Howl. Same as the *Dissonant Whispers* spell, except this is a howl: a jarring, discordant sound takes the place of whispered words, and the howl counts as the verbal component. The *Silence* spell or a similar effect will prevent the lycanthrope from using this

feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Night Hunter's Sight. Same power as the *Night Hunter's Sight* feature granted to Barrakas werewolves — the werewolf gains 60 feet of darkvision, or if the werewolf already has darkvision from another source, its range increases by 60 feet instead — except a Lharvion werewolf's darkvision can be toggled on or off at will, requiring no action. While active, the werewolf's eyes take on the pale, ringed glow of the moon Lharvion itself: unmistakable to anyone who knows the sign, and cause for at least passing suspicion in anyone who doesn't.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Night Hunter's Sight, Expanded. *Night Hunter's Sight* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Night Hunter's Sight*

Scent the Arcane. The werewolf can detect magical auras through scent, functioning exactly as the *Detect Magic* spell except that the werewolf perceives magic as a distinct smell rather than a visual aura. The school of magic is identified by the character's instinctive recognition of the scent rather than by sight. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Scent the Arcane, Humanoid. Same as the feature *Scent the Arcane* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Scent the Arcane*

Detect Thoughts. Same as the *Detect Thoughts* spell, requires no somatic component. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter

Prerequisites Level 3

Detect Thoughts, Expanded. *Detect Thoughts* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Detect Thoughts*

Scent of Poison and Disease. The werewolf can detect the presence of poison and disease through scent, functioning exactly as the *Detect Poison and Disease* spell except that the

werewolf perceives them as distinct smells rather than a visual aura, and requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Scent of Poison and Disease, Expanded. *Scent of Poison and Disease* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Scent of Poison and Disease*

See Invisibility. Same as the *See Invisibility* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

True Seeing. Same as the *True Seeing* spell, except it requires no material component — the werewolf grants truesight through touch alone, and may also grant it to themselves. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 11

Byeshk Fangs. The werewolf's claws and bite — whichever the current form grants — are forged of living byeshk rather than simple bone and keratin. Against an aberration originally from Xoriat, a claw or bite attack scores a critical hit on a roll of 19 or 20. This applies to whichever of the two attacks the werewolf's current form grants access to, without requiring a separate feature for each.

Available Forms Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

BARRAKAS: FINDING

Perspectives. Barrakas werewolves are wanderers. Their moon is Irian, the Eternal Dawn — a plane of endless renewal and warm light — but the tribe does not remain in one place long enough to bask in it. They are the messengers and far-rangers of the twelve, moving between packs on errands of intelligence and diplomacy, returning with news and departing again before anyone has asked them to stay.

This mobility is part gift and part exile. The tribe carries knowledge of all twelve tribes but belongs to none of them completely. Their instincts are oriented toward finding rather than

holding: objects, creatures, trails, truths. What they discover they deliver, and then they move on. A Barrakas werewolf who settles in one place for too long begins to feel the pull of the open road like an itch behind the eyes.

Common Locations.

Origins.

Passive Power & Traits. All werewolves have *Keen Hearing and Smell* in Dire and Animal forms, but werewolves of Barrakas have it in all forms.

Why Does It Matter?. House Tharashk's bounty hunters and monster-slayers work the Droaam frontier for a living, and their trade puts them on a collision course with Barrakas werewolves more than any other tribe: both make their living finding things, but Tharashk's finders are mundane, well-organized, and paid by the kill rather than driven by superstition or zealotry like the Silver Flame. A Barrakas pack may spend as much effort outrunning or outwitting a Tharashk bounty crew as they do avoiding the Church — and a pack in need of favors or information may find a quiet arrangement with House Tharashk more useful than the Silver Flame ever gives them credit for.

BARRAKAS POWERS

Night Hunter's Sight. The werewolf gains 60 feet of darkvision. If the werewolf already has darkvision from another source, this instead increases its range by 60 feet.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Night Hunter's Sight, Expanded. *Night Hunter's Sight* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Night Hunter's Sight*

Beast Sense. Same as the *Beast Sense* spell. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms All forms

Prerequisites Level 3

Beast Sense, Advanced. All *Beast Sense* features now require only a short rest to replenish.

Available Forms As per *Beast Sense*

Prerequisites *Beast Sense*

Scent Animals or Plants. The werewolf can identify a specific beast or plant species by scent, functioning exactly as the *Locate Animals or Plants* spell except that the werewolf perceives direction and distance through smell rather than any visual or auditory sense, and requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Scent Object. The werewolf can locate a familiar object by its scent, functioning exactly as the *Locate Object* spell except that the werewolf perceives its direction through smell rather than any other sense, and requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Scent Creature. The werewolf can track a familiar creature or the nearest of a known creature type by scent, functioning exactly as the *Locate Creature* spell except that the werewolf perceives direction through smell rather than any other sense, and requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Hunter's Mark. Same as the *Hunter's Mark* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Hunter's Mark, Advanced. All *Hunter's Mark* features now require only a short rest to replenish.

Available Forms As per *Hunter's Mark*

Prerequisites *Hunter's Mark*

Humanoid Hunter's Mark. Same as the feature *Hunter's Mark* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Hunter's Mark*

Clairvoyance. Same as the *Clairvoyance* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter

Prerequisites Level 5

Find the Path. Same as the *Find the Path* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

RHAAN: THELANIS & THE FAE

Perspectives. “We are fae and we are beast. We guard and protect Thelanis from those that would bring corruption to it. We will not let a disaster like the Sack of Shae Tiliias Torai happen again.” Obviously, this is a bit of a different world view. Thelanis werewolves are a breed apart, they are closer to Thelanis than to Eberron.

Common Locations. Rhaan werewolves are most commonly found near Thelanian manifest zones, where the boundary between Eberron and Thelanis, the Faerie Court, grows thin — places where moonlight has a quality of its own and the veil between story and flesh is at its most permeable. In his 2025 article on lycanthropes, Keith Baker identifies a category he calls **The Changing Folk**: fey beings who shift freely between humanoid and bestial form through a fey inheritance, and who prefer to remain in isolation within Thelanian manifest zones rather than engage with the outer world. This book draws on that vision for the Rhaan tribe. Their moon-bond has a distinctly fey character, their abilities touch the world of nature, story, and spirit, and their packs are as likely to be found beside a moonlit manifest zone as in a conventional wilderness.

Origins. Rhaan werewolves believe themselves to have originated from Thelanis. Their stories may repeat stories of being created during the Sack of Shae Tiliias Torai, or after, in reaction to it. Some other stories tell that they had already come from Thelanis, but their tribe failed to protect the feyspire.

Passive Power & Traits. Rhaan werewolves have *Fey Ancestry*, however, this comes up only in Hybrid and Dire forms. In other words, any spells or powers that would reveal *Fey Ancestry* would do so only in these two forms. *Fey Ancestry* is different between 2014 and 2024 rules, use whichever one you use for your campaign.

Why Does It Matter?. An all-Rhaan pack works well as the backbone of a campaign built around a Thelanian manifest zone under strain — an archfey’s bargain going sour, a seasonal rite that must be completed exactly right, or a mortal settlement that has expanded too close to a fey crossing without knowing what it borders. Their story-and-nature magic (*Speak with Animals*, *Summon Fey*, *Conjure Woodland Beings*) rewards campaigns built on bargains, omens, and the cost of a broken promise, rather than straightforward dungeon-crawling.

Consider these NPCs for your game:

- A trusted courtier, guide, or hedge witch who has walked alongside the party through an otherwise purely fey-flavored adventure — seemingly just another native of Thelanis — until the moment they need to fight for the party, when they shift to Hybrid or Dire Form and reveal themselves as a Rhaan werewolf who has been quietly testing, or guarding, the party the whole time. A ready-made twist for slotting a hereditary werewolf into a campaign that never mentioned lycanthropy.
- A Rhaan elder whose Humanoid Form is a respected go-between at an archfey’s court, but who sheds that face entirely once back among their own pack, and finds the two halves of that life harder to reconcile with each passing year.
- A Rhaan pack matriarch, most often encountered already in Hybrid Form, who judges outsiders by how they react to seeing a wolf-shaped person mid-conversation rather than by anything they actually say.

RHAAN POWERS

Speak with Animals. Same as the *Speak with Animals* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Speak with Animals, Expanded. *Speak with Animals* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Speak with Animals*

Moonbeam. Same as the *Moonbeam* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest. Shapechangers, including lycanthropes, make the Constitution saving throw with disadvantage. On a failed save, a contracted lycanthrope reverts to their Humanoid Form and suffers one level of exhaustion as per the usual rules for returning to that form, and cannot re-shift until they leave the beam. A hereditary lycanthrope instead reverts to their Hybrid Form — their truest supernatural nature, between human and wolf — and cannot re-shift until they leave the beam. *Note:* *Moonbeam* deals radiant damage, not silver damage. The lycanthrope's vulnerability to silvered weapons does not extend to radiant damage; however, the DM may rule otherwise given the thematic connection.

Available Forms Humanoid, Shifter

Prerequisites Level 3

Speak with Plants. Same as the *Speak with Plants* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Summon Fey. Same as the *Summon Fey* spell, except the material component (a gilded flower) is not required. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Dire, Animal

Prerequisites Level 5

Summon Fey, Expanded. *Summon Fey* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Summon Fey*

Conjure Woodland Beings. Same as the *Conjure Woodland Beings* spell, except the material component (holly berries) is not required. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Dire, Animal

Prerequisites Level 7

Conjure Woodland Beings, Expanded. *Conjure Woodland Beings* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Conjure Woodland Beings*

SYMPHEROS: SHADOW & THE UNDEATH

Perspectives. “We guard life on Eberron from the influence of Mabar, and the undead. We may seem monsters, but the horrors we keep in check are far worse.”

Common Locations. Sympberos werewolves are most often found near manifest zones touched by Mabar, the Endless Night — crypts and barrow-fields, the long dusk of forgotten crossroads, and places like Malleon's Gate in Sharn, where the boundary to the Endless Night runs thin. They do not linger there out of kinship with what stirs in the dark, but to stand watch over it — the same way a Rhaan pack might keep a moonlit clearing: not a shrine, but a post.

Origins. Sympberos werewolves do not have a common origin story. Different clans and packs may hold different beliefs. Some may believe themselves to be tasked with guarding life on Eberron from the undead. Others may believe themselves to be balancing influence between Khyber and Siberys, and life and undeath. Others may be associated with some mystery cults. This is a tribe of *shadows*, and the lack of

clarity in their origin story reflects that. Most hereditary werewolves distrust Mabar and are deeply wary of necromancy and the powers of undeath — forces that corrupt and subvert the natural cycle rather than serve it — and Sypheros werewolves occupy an uncomfortable position among the twelve tribes as a result. Their moon is aligned with Mabar's influence; they walk in shadow and darkness as naturally as other werewolves walk in moonlit clearings. Other tribes are often suspicious of them because of this association, and a Sypheros pack may need to work harder than most to earn trust within the broader community of hereditary werewolves. Their affinity for shadow is a tool in service of Eberron's guardianship — not a submission to the dark — but that distinction is not always easy to demonstrate, and not all tribes are willing to accept it.

Passive Power & Traits. When a Sypheros werewolf shifts into Hybrid Form, each creature of their choice within 30 feet that can see them must succeed on a Wisdom saving throw (DC 8 + proficiency bonus + Charisma modifier) or become *frightened* of the werewolf until the end of their next turn. A creature that succeeds on this saving throw is immune to this effect from that werewolf for 24 hours.

Why Does It Matter?. An all-Sypheros pack suits a campaign about mistrust and the work of proving yourself — guardians whose own community treats them as suspect by default, who must work twice as hard to be believed, and who sometimes wonder if the suspicion is entirely wrong. Their shadow magic and necrotic resistance fit naturally into intrigue set around Karrnath's crypts, a Blood of Vol congregation, an Emerald Claw plot, or a Mabar manifest zone where something restless has started to stir. Create a pack of werewolves fighting in Karrnath against the Blood of Vol, perhaps working with the Royal Eyes of Aundair? Or set a pack directly in the Mournland itself, hunting the restless dead that wander its gray mists — grim work that plays to a Sypheros pack's shadow magic and necrotic resistance in a way few other tribes could match, and a natural fit for a party willing to operate somewhere even the Church avoids sending inquisitors. A different angle entirely: a pack opposed to (or quietly complicit with) Karrnath's own sanctioned undead legions — the kingdom's crown-approved military necromancy, distinct from the Blood of Vol's religious devotion — forcing the pack to decide whether the undead in front of them are an abomination to destroy or a soldier's grim, lawful duty to leave alone.

Consider these NPCs for your game:

- A Sypheros werewolf working undercover inside a Blood of Vol congregation to gather intelligence for their pack, whose cover is wearing dangerously thin.
- A Sypheros werewolf who, during the long nights locals call *Long Shadows*, is approached by a cult of the Shadow, one of the Dark Six, who mistake the werewolf's Mabar-aligned power for kinship and try to recruit them. The werewolf must publicly — and sometimes violently — prove that an affinity for shadow serves Eberron's guardianship, not the Dark Six.

SYPHEROS POWERS

Dissonant Growl. Same as the *Dissonant Whispers* spell, except this is a growl, not a whisper: a guttural, discordant sound that claws at the listener's mind rather than hissing in their ear. The growl carries an echo of Xoriat bleeding through the shadow of Mabar — a reminder that the Realm of Madness presses against every plane, and that Sypheros's darkness is no more a refuge from it than any other. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Cunning Action. When in dim light or darkness, the werewolf can use a bonus action on each of their turns to take the Dash, Disengage, or Hide action.

Available Forms Hybrid, Dire, Animal

Pass without Trace. Same as the *Pass without Trace* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Pass without Trace, Expanded. *Pass without Trace* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Pass without Trace*

Darkness. Same as the *Darkness* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 3

Devil's Sight. The werewolf can see normally in darkness, both magical and nonmagical, to a distance of 120 feet.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Resistance to Necrotic. The werewolf has resistance to necrotic damage. Their nearness to Mabbar's influence has hardened them against it rather than corrupted them.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Necrotic. The werewolf has resistance to necrotic damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Resistance to Necrotic*

Shadow Step. As a bonus action, the werewolf can teleport up to 30 feet to an unoccupied space they can see, provided both the space they leave and the space they arrive in are in dim light or darkness. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 5

Speak with Dead. Same as the *Speak with Dead* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter

Prerequisites Level 5

Veil of Shadow. Based on the Mask option of the *Nystul's Magic Aura* spell, except this is an innate, always-active trait rather than a spell that must be cast, requires no components, and needs no willing target since it applies to the werewolf themselves. For the purpose of spells and magical effects that detect creature type — such as a *glyph of warding's* trigger or a *Sentinel*-tuned item's passive detection — the werewolf appears as the humanoid they are based on, not as a shapechanger. *Truesight* and *true seeing* see through this as normal, since they perceive true forms directly rather than reading creature type.

Available Forms Hybrid, Dire, Animal

Prerequisites Level 7

Veil of Shadow, Expanded. *Veil of Shadow* is now active in all forms, masking the werewolf even while they walk as Humanoid or Shifter.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Veil of Shadow*

Holy Weapon, Bestial. Same as the *Holy Weapon* spell, except it applies to the werewolf's claw or bite attack, whichever is available, rather than a held weapon, and requires a howl instead of its verbal and somatic components. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your

proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid, Dire, Animal
Prerequisites Level 9

ARYTH: PASSAGE

Perspectives. Aryth werewolves see themselves less as a settled tribe than as a vocation: they are the ones who walk between. Between one place and the next, between the living and the dead, between what may be spoken and what must be kept. Some hold to the older, more severe reading of that role — that their purpose is to guard forbidden knowledge of what lies beyond Dolurh's gray horizon, and to keep the living from learning it before their time. Others take a gentler, more philosophical view: that the passage is inevitable, that fear of it is the true corruption, and that a werewolf who has made peace with their own mortality is best equipped to guide others toward the same peace. Both views agree on one thing: home is wherever the road currently is.

Common Locations. Aryth werewolves are wanderers by nature, rarely bound to a single territory the way Olarune or Zarantyr packs are. They are drawn to thresholds — old crossroads, pilgrim roads, ferry crossings, and the borders of places touched by death, most of all the Mournland, whose dead-but-not-dead stillness feels to them like Dolurh bleeding through into the living world. Aerenal, with its ancestor-venerating elves and its own complicated relationship with undeath, is another place an Aryth pack might be found, watching and occasionally arguing with the Undying Court about what, exactly, a proper passage looks like.

Origins. Aryth werewolves' stories tell of a moon that first taught werewolves the shape of the road between life and death, and set the earliest among them to walk it as guides for the dying and wardens against what might try to walk it the other way. Some tribes date their founding to a specific catastrophe — a plague, a massacre, a war — when too many souls needed guiding at once and the moon answered by making guides of them. Others simply hold that the role has always existed, and that Aryth only gave it a name.

Passive Power & Traits. The Mark of Passage opens the way; the moon Aryth embodies that principle in motion. When an Aryth werewolf enters Hybrid Form, their base movement speed increases by 10 feet for as long as they remain in that form. This stacks with any other speed increases from Moon Powers or feats.

Why Does It Matter?. An all-Aryth pack suits a campaign built around thresholds — literal border crossings, a party escorting someone (or something) that must not be allowed to arrive, or a mystery that keeps circling back to what exactly happened at the edge of the Mournland. Their detachment from any fixed territory makes them natural traveling companions for a party that moves between adventures rather than settling into one region, and their fluency with death and forbidden lore gives them a foot in exactly the kind of secrets other tribes would rather leave buried.

Consider these NPCs for your game:

- An Aryth wanderer who has appointed himself psychopomp for a stretch of road bordering the Mournland, quietly escorting the confused, grieving, or dying travelers who wander too close, and just as quietly turning back anyone who wants to go looking for answers there.
- An Aryth elder who has spent decades collecting forbidden lore about Dolurh and refuses to share any of it, not out of malice, but because they are certain some knowledge only causes harm once spoken aloud — and the party needs exactly the piece they won't give up.
- A young Aryth werewolf who took up the tribe's philosophy of detachment too literally, drifting from place to place and refusing to form the kind of lasting bonds a pack usually depends on, until an encounter with the party gives them a reason to stay somewhere for once.

ARYTH POWERS

Longstrider. Same as the *Longstrider* spell, except that the werewolf can only cast it on themselves. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire, Animal

Humanoid Longstrider. Same as the feature *Longstrider* above, except it is available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Longstrider

Longstrider, Advanced. All *Longstrider* features now require only a short rest to replenish.

Available Forms As per Longstrider

Prerequisites Longstrider

Spider Climb. Same as the *Spider Climb* spell, except that the werewolf can only cast it on themselves. You can use this feature a number of times equal to your proficiency bonus, and

you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid

Spider Climb, Advanced. All *Spider Climb* features now require only a short rest to replenish.

Available Forms As per Spider Climb

Prerequisites Spider Climb

Speak with Dead. Same as the *Speak with Dead* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter

Prerequisites Level 5

Tree Stride. Same as the *Tree Stride* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 5

Freedom of Movement. Same as the *Freedom of Movement* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 7

Preternatural Speed. The werewolf's base movement speed increases by 10 feet. This is a passive benefit, always active.

Available Forms Hybrid, Dire, Animal

Preternatural Speed, Expanded. *Preternatural Speed* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Preternatural Speed

VULT: SHAVARATH, THE BATTLEGROUND

Perspectives. Vult werewolves see themselves as soldiers first and guardians of Eberron second, with little daylight between the two roles. Shavarath is the farthest moon, and its plane the site of an endless war fought to keep something far worse from ever reaching Eberron at all; Vult packs carry that same siege mentality, treating every threat as the one that finally proves the wall was needed. A harder-line minority within the tribe pushes this further: wolf-nature over humanoid nature, wilderness over settlement, and a deep suspicion of the very humanoid civilizations the tribe is sworn to protect. Most Vult werewolves reject that extremity, but few entirely dismiss the discipline and readiness it demands.

Common Locations. Vult werewolves gravitate toward frontiers and old battlegrounds — ruined fortresses, contested borders, and the sites of Last War engagements that never quite finished — along with the rare manifest zones that touch Shavarath, where the boundary between Eberron and the eternal battleground grows thin and armies are said to nearly bleed through. They are as comfortable garrisoning a frontier keep as they are patrolling a wilderness border, wherever there is a line worth holding.

Origins. Vult werewolves' stories describe their moon as a watch-fire lit at the farthest edge of Eberron's sky, and their earliest ancestors as the sentries first posted to keep vigil against whatever Shavarath's endless war might eventually let through. Some packs claim a direct founding during one of the Last War's worst battles, when the moon called soldiers to it

who never fully stopped fighting. Others hold that the vigil predates any war fought by mortals, and that the Last War was only the most recent thing Vult werewolves mistook, briefly, for the real threat.

Passive Power & Traits. In the Animal Form, all werewolves have *Pack Tactics*, but werewolves of Vult have it in all forms. Furthermore, they can use their Bite Attack in the Shifter Form.

Why Does It Matter?. An all-Vult pack suits a campaign built around holding a line — garrisoning a frontier keep, defending a town through a siege, or standing against something that has started leaking through a Shavarath manifest zone. Their martial, always-ready disposition makes them natural allies for military or mercenary-adjacent parties, while the tribe's harder-line minority offers a ready-made source of internal conflict: a splinter cell willing to sacrifice the very humanoids they are sworn to protect if it means holding the wall.

Consider these NPCs for your game:

- A Vult garrison commander who has held the same frontier keep for twenty years against a threat that has never come, and whom the party must convince is not simply seeing enemies that aren't there.
- A Vult werewolf drifting toward the tribe's harder-line philosophy, increasingly convinced that the humanoids they guard are more liability than cause, and whom the party can still pull back from that edge — or watch tip over it.
- A pack of Vult sentries stationed at a newly discovered manifest zone touching Shavarath, certain that something on the other side has finally noticed them, and desperate for outside help before it does.

VULT POWERS

Warding Bond. Same as the *Warding Bond* spell, except this requires no material components. This represents the werewolf's primal instinct to shield their packmates through a supernatural bond. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Dire, Animal

Warding Bond, Expanded. *Warding Bond* is now available in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites *Warding Bond*

Mark Territory. This functions exactly as the *Alarm* spell, except the lycanthrope marks the perimeter with scent markings over 1 minute rather than casting a spell, and requires no

components. The mental alert option is a primal awareness rather than a chime, but is otherwise identical.

Available Forms Humanoid

Prerequisites Level 3

Mark Territory, Expanded. *Mark Territory* is now available in Shifter form as well. Additionally, the werewolf may choose to emit an audible howl (heard up to 300 feet away) when the boundary is crossed, instead of a mental alert. If the audible howl option is chosen, the *Silence* spell or a similar effect active on the lycanthrope at the time of the crossing will suppress the howl.

Available Forms Humanoid, Shifter

Prerequisites *Mark Territory*

Find Traps. Same as the *Find Traps* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Barbed Hide. Based on the *Armor of Agathys* spell. The werewolf's hide erupts with rigid bone quills. The werewolf gains 10 temporary hit points. While these temporary hit points last, any creature that hits the werewolf with a melee attack takes 10 piercing damage. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire

Prerequisites Level 3

Quill Ward. Based on the *Fire Shield* spell. Bone quills and iron-hard spines cover the werewolf's body. For the duration, any creature that hits the werewolf with a melee attack while within 5 feet takes 2d8 piercing damage. The werewolf also gains resistance to one damage type of their choice (bludgeoning, slashing, or piercing) for the duration. The ward lasts for 10 minutes. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire

Prerequisites Level 7

Iron Hide. Based on the *Barkskin* spell. The werewolf's hide thickens and hardens, plates of dense tissue forming across the shoulders, back, and forearms. While this feature is active, the werewolf's AC cannot be lower than 16, regardless of armor or equipment. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Hybrid, Dire

Prerequisites Level 3

Stone Hide. Based on the *Stoneskin* spell. The werewolf's hide becomes as unyielding as granite, absorbing blows that would fell lesser creatures. While this feature is active, the werewolf has resistance to nonmagical bludgeoning, piercing, and slashing damage. The effect lasts for 1 hour or until the werewolf drops to 0 hit points. You can use this feature once, and you regain the use when you finish a long rest.

Available Forms Hybrid, Dire

Prerequisites Level 7, *Iron Hide*

Holy Weapon, Bestial. Same as the *Holy Weapon* spell, except it applies to the werewolf's claw or bite attack, whichever is available, rather than a held weapon, and requires a howl instead of its verbal and somatic components. The *Silence* spell or a similar effect will prevent the lycanthrope from using this feature. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Shifter, Hybrid, Dire, Animal

Prerequisites Level 9

CRYA, THE LOST MOON

There are no werewolves associated with Crya. Three options exist for your campaign:

- They never existed - Crya disappeared before werewolves came into existence.
- They existed, but they disappeared after Crya disappeared.
- They exist, but they lost all of their moon powers after Crya disappeared. They do not get any advantage or disadvantage to their shifting rolls.

(See the section on the alternative histories of werewolves in Eberron.)

Should Crya come back in your campaign, they can exist or get their powers again. (Just hand out the powers as they would be, depending on the current level of the characters.)

Here, I have some Crya Powers, associated with Dal'Quor and with the Mark of Death. This is just for guidance. What happens if Crya or Dal'Quor comes back, or if Mark of Death appears again is a campaign-specific decision. Therefore, the powers also should reflect whatever is happening in the campaign.

Perspectives. Whatever their perspectives were, those disappeared when they disappeared. Alternatively, they exist in secrecy, outcasts, and could be shunned if they were ever found out. Just one thing: the history of the thirteenth moon is not well-known around Eberron, it happened 40 thousand years ago, and the human civilizations in Eberron had nothing to do with it. By definition, the members of a

secret tribe would be painfully aware that they have no moon powers, or through their stories, they would know that *something* happened in the past. Their existence, if found out by others, would start people to have questions about a “missing moon”. So it makes sense that they either do not exist, or are in hiding, or in a very obscure location with very few numbers at the start of a campaign.

Common Locations. Nowhere, or somewhere in hiding.

Origins. They do not exist, so we do not know their origins.

Passive Power & Traits. Crya werewolves are immune to the *sleep* spell and all magical or mundane effects that would cause them to fall asleep, in all forms. They walk the boundary between the waking world and Dal’Quor’s dreaming dark; that threshold cannot be crossed by force.

Why Does It Matter?. This matters only if Crya is coming back. However, a lost tribe of werewolves with no powers could be an interesting set of NPCs for a werewolf campaign. This could be how the players find out that there was a thirteenth moon.

Crya werewolves can communicate telepathically with any creature within 60 feet that shares at least one language, in all forms. This is a passive inheritance of Dal’Quor’s psionic character — the Quori speak mind to mind, and something of that way of being passes through the lost moon’s bloodline.

CRYA POWERS

Pass without Trace. Same as the *Pass without Trace* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Wither and Bloom. Same as the *Wither and Bloom* spell, requires no components. You can use this feature a number of times equal to your proficiency bonus, and you regain all expended uses when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Level 3

Resistance to Psychic. The werewolf has resistance to psychic damage.

Available Forms Hybrid, Dire, Animal

Humanoid Resistance to Psychic. The werewolf has resistance to psychic damage in all forms.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Resistance to Psychic

Dream. Same as the *Dream* spell, requires no components. The werewolf shapes the dreams of a sleeping creature they are familiar with, regardless of distance. You can use this feature once, and you regain the use when you finish a long rest.

Available Forms Humanoid, Shifter

Prerequisites Level 5

Deathless Packmate. Reaching for what remains of the Mark of Death buried in their blood, a Crya werewolf can drag a dead packmate back across the threshold Aryth guards — not truly returned, but bound. As an hour-long ritual performed over the corpse of a werewolf, hereditary or contracted, that died no more than a year ago, the werewolf raises the body as an **Undead Werewolf**: an abomination unrecognized by any of the twelve moons. For the purposes of *counterspell*, *dispel magic*, or similar effects, treat this ritual as an 8th-level spell — the same level at which a spellcaster could first prepare *create greater undead*.

The Undead Werewolf keeps the hit points, hit dice, ability scores, proficiencies, feats, and base-class features it had in life, exactly as they were at the moment of death, in whichever form it died — undeath preserves the body and the training, even as it severs everything else. With the following changes:

- Its bond to its moon is severed entirely. It loses the Passive Power & Traits granted by its tribe, and every Moon Power it had gained — Zaranthyr’s Thunderwave, Nymm’s Silver Ward, and so on — ceases to function. None of this can be restored short of ending its undeath.
- Its creature type becomes Undead in addition to its original type, and it no longer needs to eat, drink, sleep, or breathe.
- It is immune to poison damage and the poisoned condition, and it cannot be charmed or frightened.
- It is locked into the form it died in and can no longer shift; the Werewolf Class shifting rules no longer apply to it.
- It gains resistance to necrotic damage, but its vulnerability to silver is now joined by a second vulnerability, to radiant damage.
- It no longer recovers hit points by resting. Instead, it regains all of its hit points if it spends a full night within 100 feet of the werewolf who raised it — feeding on that bond the way a living wolf feeds on a kill.
- It obeys the verbal commands of the werewolf who raised it to the best of its ability, and carries out routine orders (guard, follow, attack a creature it can see) without needing to be told again. Controlling it requires no concentration, and distance does not sever the

bond, though the DM may rule that a sufficiently long absence, or the raiser's death, eventually leaves it masterless and feral.

- It retains fragments of who it was — old habits, a flinch at a familiar name, the shape of a howl it used to know — enough that packmates who knew it in life find commanding it far more disturbing than commanding a mindless zombie ever could.

A Crya werewolf may have no more than one Undead Werewolf bound to them at a time; raising a second releases the first from their control, leaving it feral and hostile to all living creatures, including its former master. Where other tribes see necromancy as the deepest corruption of the natural cycle there is, a Crya werewolf who performs this ritual needs no explanation for why they alone among the twelve do not flinch from it.

Available Forms Humanoid, Shifter

Prerequisites Level 15

FEATS

The following feats are available only to hereditary werewolves. They represent abilities developed through training, deepened moon-bond, or supernatural maturation — and are taken in addition to the Moon Powers gained through the Werewolf Class.

PLANE SHIFT

Same as the *Plane Shift* spell, except this is an innate ability requiring no components. The material component (a forked metal rod attuned to a specific plane) is not needed — the werewolf's moon-bond serves as the attunement. However, the moon-bond also constrains the destination: the werewolf may only shift to or from the plane associated with their moon, as listed in the Moons and Associated Planes table. The werewolf can transport themselves and up to eight willing companions to that plane, arriving near the intended destination at the DM's discretion. Alternatively, the werewolf may use this ability offensively: make a melee spell attack against an unwilling creature; on a hit, the target must succeed on a Charisma saving throw or be transported to a random location on the werewolf's associated plane. You can use this feat once, and you regain the use when you finish a long rest.

Available Forms Humanoid, Shifter, Hybrid, Dire, Animal

Prerequisites Werewolf Class Level 16

RADIANT FANGS

The werewolf's claw and bite attacks — whichever their current form grants — can be made to deal radiant damage instead of their normal damage type, at the werewolf's choice each time they hit. Once per turn, when the werewolf hits an undead creature with a claw or bite attack dealing radiant damage this way, the attack deals an extra 1d8 radiant damage. This feat is most at home among Sypheros werewolves, whose guardianship against Mabar and the undead makes its light-in-the-shadow theme a natural fit, but any hereditary werewolf may take it.

Available Forms Shifter, Hybrid, Dire, Animal
Prerequisites Werewolf Class Level 8

SPELLS

The following spell is included for completeness. Under normal circumstances it is an NPC spell — known only to Oalian the Greatpine and, at the DM's discretion, to elder Moonspeakers. It is not found in any spellbook; it is passed orally from archdruid to chosen successor. A player character druid may learn it only with explicit DM permission, in the context of a campaign where the transformation of a contracted lycanthrope is a meaningful story event.

RITE OF OLARUNE

7th-level transmutation (ritual)

Casting Time: 1 hour

Range: Touch

Components: V, S, M (water drawn from a natural spring under a full moon, a sprig of wolfsbane, and 500 gp of silver dust, which the ritual consumes)

Duration: Instantaneous

You touch a willing creature afflicted with contracted lycanthropy and perform the rite over the course of one hour, chanting in Druidic under open sky during a full moon. At the ritual's completion, the lycanthropy is reborn. It is no longer a curse — it becomes a permanent, hereditary bond between the subject and one of Eberon's twelve moons.

The target's lycanthropy can no longer be removed by *remove curse*, *greater restoration*, or similar effects. It is treated in all respects as hereditary lycanthropy. The target may take levels in the Werewolf Class.

The target's moon affiliation is determined by whichever of the twelve moons is fullest at the moment the ritual concludes. If the target was infected by a lycanthrope of a specific moon and that moon is full during the ritual, that moon takes precedence.

This ritual must be performed outdoors under a full moon. If the moon becomes fully obscured at any point during the ritual, the ritual fails and must be begun again. The ritual has no effect on a creature that does not have contracted lycanthropy, or on a creature that already has hereditary lycanthropy.

HISTORY OF LYCANTHROPY IN EBERRON

Throughout the book, I focused on the mechanics. I also hinted at some origin stories of werewolves. However, I did not present a full lore of how werewolves came into existence. This is intentionally left to the DM.

Here, I present some options that fit within the world of Eberron.

The Origin Stories Are True. In this version, werewolves come into existence all the way back at the Age of Demons, or even earlier, genuinely as guardians on Eberron against Khyber's forces. They may have been created by Balinor, or they are children of Eberron.

At this point, in their earlier history, werewolves are only mating with wolves, and only have Hybrid, Dire and Animal forms. It is only when they come across humanoids and shifters that they discover that they can shift further.

Once the humanoids are in existence, the overlord "Wild Heart" finds a way to infect their blood. This infection causes humanoids who get their blood (or saliva) into their system to get lycantropy, at least the shifting part. The contracted lycantropes come under the control of "Wild Heart", or are just completely chaotic if the overlord is not "close to Eberron". (Currently, "Wild Heart" is bound under the Towering Wood.)

Hereditary werewolves realize that attacking humans is a risk for them. They also realize that humans cannot tell the difference between a contracted werewolf, and themselves. This causes werewolves to either shun humans, or keep their identity secret even when they coexist. By the time of the Silver Crusade, they are used to living apart from humanoids, or in secrecy.

Before the crusade, the overlord "Wild Heart" begins to stir beneath the Towering Wood. This increases the rate of infections, and turns contracted lycantropy into an epidemic. Most of this happens without the hereditary werewolves having anything to do with it, they are innocent bystanders. But of course the Church hunts them anyway - it is not possible to explain how they fit in after millennia of secrecy.

The Origin Stories Are True, But With A Twist. Same as above, but the werewolves are specifically created by The Traveller. They are there to add balance. Their shifting powers come from the The Traveller, and their connection to a moon is more of a syphon than anything else. The origin myths are created by The Traveller, too, to give werewolves a sense of identity.

What does The Traveller hope to achieve? As is typical when discussing The Traveller, we do not know.

Feel free to adjust the origin stories of the tribes accordingly, if going this way. Sypheros werewolves may be more aware of the truth behind their creation.

The Origin Stories Are True, But With A Darker Twist. Werewolves are guardians on Eberron, that much is true. However, the Dravago see the humanoids as a corruption, and the other tribes as having become complicit in this corruption. They want to restore and "heal" Eberron into its original state. This is what caused the lycantropy epidemic before the Silver Crusade. They failed, but may try again.

The Origin Stories Are Not Exactly True. Same as above, but the Dravago are right. They were created by The Fury as an ultimate expression of the hunt. Over the centuries, they assigned themselves a different role because they coexisted with the humanoids ever since the Age of Giants.

The Truth is Much Less Glamorous. First lycantropes appeared around the Age of Giants, as an experiment on the elves, some time between 40 and 80 thousand years ago. First as weretigers, and maybe even the werespiders were the first lycantropes. Werewolves appeared later, and eventually spread to Khorvare from Aerenal and Valinor.

This is an option for a campaign centered around Xen'drik. For now, I am leaving this section short, but in future iterations, I may add weretigers to Xen'drik, and this may become its own chapter, tracing the giants' original experiments through to the weretiger and werespider strains that still linger there today.

Oalian. Oalian the great druid discovered the secret of the Rite of Olarune, and perhaps a more powerful version of it that ust creates a werewolf, and has been creating them ever since. Their history goes back just between 2000 and 3000 years. And they are truly guardians of nature, specifically.

In this version, the tribes do not have those origin stories. However, they may be aware that one of their ancestors were created by Oalian.

The Draconic Prophecy - Much Shorter History. Werewolves first started appearing

around the same time the corresponding Mark appeared, in Khorvaire. In this scenario, the werewolf “tribes” may or may not have their origin stories, or they might not even act as tribes, but as individuals. Their history then goes back around 2000 yeears or so, not more.

The history of the Silver Crusade is similar: seeing this development, the overlord “Wild Heart” stirs and finds a way to exert their influence on the werewolves. Their blood now infects their victims, creating the contracted werewolves, which come under the control of the “Wild Heart” if the overlord is close to being unbound. The threat from the overlord is defeated, but may come back.

PLANNED EXPANSIONS

The twelve tribes detailed in this book are werewolves, bound to Eberron’s moons and Siberys’ guardianship — but Keith Baker’s lycanthropes are wider than wolves alone, and this book intends to grow to meet them.

Weretigers are planned next, prowling the deep jungles of Xen’drik, and the untamed jungle reaches of Valenar and Q’barra — solitary guardians suited to country too wild and too dangerous for a pack to hold.

Werebears are also planned, for the Darkwood Forest in the Eldeen Reaches, the Starkwood in the Mror Holds, and some of the islands nother of Khorvaire for polar werebears.

Wererats are planned as well, at home in the crowded undercities of Stormreach and Sharn — guardians whose territory is not open wilderness but the tunnels, sewers, and forgotten spaces beneath civilization’s greatest cities.

Werereptiles are planned for Q’barra - no details yet.

Werereptiles, are in consideration for the Lhazaar Principalities.

Werespiders as drow between dryder and swarm forms may be an option - this is still in consideration. There is already enough material on spiders and drow.

None of these strains are bound to the twelve moons the way werewolves are, and each will need its own guardian tradition rather than simply borrowing this book’s lunar framework. Expect them in a future edition of this book.
